

DEPARTMENT FOR PROMOTION
OF INDUSTRY & INTERNAL TRADE

Single Window System for States

A Guidebook

Department for Promotion of Industry & Internal Trade

May 2025

Table of Contents

1. Introduction 1
2. Services on Single Window Systems 4
3. Essential Modules 5
   - A. Single Sign-On (SSO) and Single Business ID 5
   - B. Know Your Approval (KYA) Module 5
   - C. Common Application Form (CAF) Module 6
   - D. Unified Payment Module 7
   - E. Comprehensive Dashboards Module 7
   - F. Inspections Module 9
   - G. Guidance Module 9
   - H. Grievances & User Feedback Module 10
4. Desirable Modules 12
   - A. Land Bank Details 12
   - B. Mobile & Multilingual Interface 12
   - C. Guided User Assistance Tools 13
   - D. AI-Powered Chatbot 13
   - E. Intent to Invest Module 13
5. State SWS Technology Stack 14
   - A. Integration Module 14
   - B. Communication Module 15
   - C. Search Module 16
   - D. Reporting & Dashboard Requirements 17
   - E. Cross Cutting Services 18
   - F. Information Security 19
   - G. System Architecture Overview - Key Features 19
   - H. Information Security Requirements 20
   - I. Web Service Threat Protection 21
   - J. Message Snooping 22
6. National SWS Technology Stack 24
7. Annexures (Templates and Guidelines for Module Implementation) 26
8. Assessment Methodology 87

1. Introduction

1.1. India has made remarkable progress in improving Ease of Doing Business over the past ten years, bringing in multitude of reforms. Reducing Compliance Burden for businesses has followed a four-pronged strategy of simplification, elimination, digitization, and decriminalization. Single Window Systems have been an essential element of the simplification and digitization exercise at the State levels. The efforts made towards these directions have also been captured as part of the Business Reform Action Plan (BRAP), a collaborative exercise of the Central and State Governments, since its launch in 2014-15. As per the last assessment 30 States/ UTs have functional Single Window Systems (SWS).

1.2. SWS is a digital platform that provides investors a single touch point to seamlessly apply for approvals, obtain licenses, meet their compliance requirements as well as access relevant information throughout the business lifecycle. By reducing physical touchpoints and procedural delays, the SWS promotes transparency, accountability, and timely service delivery. A successful and effective SWS involves re-engineering that simplifies procedures at the backend reducing the number of steps taken for approval, doing away with non-essential documents or seeking information already available, etc.

1.3. The key objectives of a SWS can be classified as providing a **One-stop digital access** thereby eliminating or substantially doing away with physical interface and the need to visit multiple government departments for approvals, compliances or accessing relevant regulatory information; faster approvals reducing time taken and documentation required; transparency and efficiency by providing real-time (or near real time) status of applications; ensuring seamless flow of information across departments doing away with seeking of information repeatedly.

1.4. This guidebook identifies the **services (Annexure 9)** that are essential and must be provided through the State SWS. It also identifies services that may be desirable from the investor point of view.

1.5. The guidebook also provides details on the essential and desirable features, which have been categorized into the modules, which are required for an effective SWS:

i. Essential Modules:

1. Single Sign on and Single Business ID
2. Know Your Approvals
3. Common Application Form

4. Unified Online Payment Services
5. Comprehensive Dashboards
    i) SWS Performance
    ii) Applicant
    iii) Incentive
6. Inspection
7. Applicant Guidance Module
8. Grievance Redressal & User Feedback

ii. Desirable Modules:

1. Land Bank
2. Mobile & Multilingual Interface
3. Guided User Assistance Tools
4. AI-powered Chatbot
5. Intent to Invest

1.6. BRAP 2025 prioritizes and lays special emphasis on the implementation of an effective SWS, aiming to make it a true one-stop shop for investors. All States/UTs are expected to implement end-to-end digitization, for the identified services, in accordance with the guidebook. To guide implementation, the following annexures have been attached as reference tools and must be followed in letter and spirit for successful rollout:

1. Annexures 1–8: Module templates to support automation, SLA-driven workflows, and lifecycle coverage
2. Annexure 9: List of services to be made available on the SWS
3. Annexure 10: GIS Land Bank
4. Annexure 11: Intent to Invest
5. Annexure 12: Illustrative Wireframe for placement of modules on SWS

1.7. The guidebook also explains the State and National Single Window System technology stacks to help States build systems that ensure interoperability and scalability. It describes the reasons for choosing each technology module and then illustrates the technological requirements for implementation.

1.8. To ensure seamless implementation, the guidebook also covers the assessment methodology for States and UTs. This methodology is objective and ensures in-depth implementation, along with a live demonstration of the work undertaken.

1.9. In order to ensure effective implementation of the SWS, the States/UTs should also consider the following key actions to make the systems more effective:

1. Enact and notify the Single Window Act, which gives statutory backing to the State SWS.
2. Enact and adopt the Public Service Guarantee (PSG) Act with SLA- bound service delivery for identified approvals and appoint a nodal agency to oversee coordination and grievance redressal.
3. Develop a secure, API-enabled portal integrated with NSWS and all departmental systems, featuring dashboards, multilingual access, and investor helpdesk. If standalone departmental portals exist, API integration must ensure a unified, seamless user experience.
4. Monitor implementation performance using SLA data, investor feedback, and grievance trends. Regular updates must be published department-wise using standard templates and dashboards to ensure effective SWS delivery on the ground.

1.10. The document takes into account feedback received from States during the various consultations held with them, and specifically the consultation held on 14th May 2025.

1.11. Reference is also provided to some of the good practices across the country on the modules and other interventions required to be undertaken by the States and UTs, for ease of implementation.

2. Services on Single Window Systems

2.1 The essential services should be provided only through the SWS on an end-to-end basis for it to be useful. In addition, there are services, if provided, would add further value to businesses availing of services through the SWS and it would be desirable to provide these services on the platform.

2.2 The services which are essential and desirable to be provided through the SWS are listed at **Annexure 9**. These eighty services have been classified into pre-establishment, pre-operations, and post-operations.

2.3 For all services, essential and desirable which are on-boarded on SWS, there should not be any parallel physical mode of accepting or processing the applications online, and there should not be any requirement for the applicant to physically visit an office.

2.4 For the onboarded services, all associated actions i.e., the initial grant/ approval, renewal, amendment, transfer, surrender should be provided through the SWS.

3. Essential Modules

A. Single Sign-On (SSO) and Single Business ID

3.1. Implement SSO, for applicant to access all State SWS and NSWS-integrated services with one login. A Single Sign-On across platforms allows a user to access facilities across a website or different platforms using a single ID.

3.2. For a business, Income Tax PAN issued by CBDT is mandated and widely accepted as a Business ID across various platforms. It is also used across various SWS in the States. SSO may also be PAN based.

3.3. An entity may have multiple units across the State. For each unit, a PAN-based Single Business ID, derived from the entity's PAN, should be mandated as the unique identifier for the units. Wherever SWS uses a different ID, the same may be transitioned in a time bound manner. This would enable seamless integration, service delivery, and lifecycle tracking under the SWS.

Reference: Maharashtra is implementing the 'Business Identification Number' (BIN) on its SWS. The format is unique across all units operating in the state, wherein PAN is primary key mapped with BIN. The secondary keys mapped to BIN are GSTIN, Pin code, Alphanumeric code among others.

B. Know Your Approval (KYA) Module

3.4. KYA module should help investors easily know what approvals or licenses have to be obtained and applicable compliances for the business to be established or being carried out by them. It should serve as a simple, reliable tool for navigating regulatory requirements.

3.5. An effective KYA Module should have the following functionality and features:

1. A dynamic questionnaire that filters out non-applicable services (e.g., no fire NOC required for buildings under 15 meters).
2. For each approval/ clearance, the module must provide the following details:
    i) Name of the service
    ii) Responsible Ministry/Department/Agency
    iii) Stage of business (Pre-establishment, establishment, Post establishment)
    iv) Stipulated time (in days) for delivery of the service (As per the Public Service Guarantee Act)
    v) Step-by-step standard operating procedure (SOP), required documents, and applicable fees, including timelines for approval
    vi) Direct link to apply for the service
3. Tailor the KYA results to applicant inputs such as industry type, number of employees, risk category, firm size, business location, and applicant type (foreign/domestic), covering the relevant stage of the business lifecycle.

4. The output of the KYA Module should be downloadable in the form of a pdf document. The document output must clearly indicate the input parameters against which the detailed approval/compliance list has been generated. The document containing the output should also contain a confirmation that it lists the final set of applicable requirements with the disclaimer that the listed set is applicable as per the project details provided by the applicant on the date of output.
5. Publish information on any new approval/clearance within 15 days of its introduction and integrate the same into the module. SWS homepage must feature a dedicated, clearly visible section, such as a "What's New" or "Latest Updates" area. This section must provide real-time updates on new and revised policies, schemes, regulatory changes, and any other significant information affecting businesses. The States may also consider integrating information on new requirements with notifications published on e-Gazette websites through secure API.
6. Use the template provided in **Annexure 1** as a reference for generating KYA outputs, ensuring consistency in format, structure, and data representation.

3.6. Ensure that the KYA module is accessible pre-login, allowing investors to view required approvals and compliances based on their profile. Provide an option to log in/register after the search is completed.

C. Common Application Form (CAF) Module

i. Reform guidelines

3.7. Implement a dynamic CAF that adapts automatically based on applicant inputs such as industry type, business location, and enterprise size.

Reference: Telangana has developed dynamic CAF in TS-iPass that entrepreneurs use to apply for various approvals.

3.8. Ensure the CAF is linked to the applicant profile, enabling auto-filling of non-sensitive fields to reduce duplication and ease the application process.

3.9. CAF must facilitate the easy uploading of all required supporting documents by the applicant, in specified formats and sizes. To minimize requirement for scanning of documents and repeatedly uploading documents, the State SWS should integrate with the concerned Departments/ Regulators which are the approving/ issuing authorities for the documents leveraging API Setu with applicant consent. An indicative list of such document issuing authorities as on date is at **Annexure 1A**.

3.10. MeitY, Government of India has also rolled out Entity Locker (for entities) and Digi Locker (for individuals), which provide documents issued by various issuing authorities at one place. SWS should integrate with Digi Lockers to access signed/authenticated digital documents with applicant consent.

ii. Processing guidelines

3.11. Enable backend integration such that the application is transmitted in parallel to all relevant departments based on the applicant inputs and applicable services.

3.12. Mandate that departments should raise queries, if any, as per a defined protocol, within 7 days of CAF submission. Any further query should be an exception and should only be allowed with approval from at least the next higher level.

3.13. A real time dashboard for each level in the approval chain, as well as for Secretary/ HoD should be provided. The dashboards should provide status of each approval linked to the CAF, with flags for action required (by department and applicant); queries asked, and time taken at each level etc. for monitoring/ review. A mechanism should be put in place for regular review on time taken as well as queries raised at an interval not exceeding a month.

3.14. Use the template provided in **Annexure 2** as the standard format for the CAF and its logic tree, ensuring uniformity.

D. Unified Payment Module

3.15. All payments should be made only in the online mode.

3.16. A consolidated payment gateway must be implemented within the State SWS. For multiple services applied through the CAF, the system should allow for a consolidated payment for all applicable fees for the services. The SWS should, at the backend be able to allocate and transfer the fees automatically online to both treasury as well as bank accounts, as may be applicable.

3.17. Digital challans/ receipts of payments made for each service should be separately provided to the applicant

3.18. Reimbursements & refunds of all services should also be done online through SWS platform.

3.19. Issues, if any regarding payment linked to treasury/banking channels should be resolved at the government level and the user should be able to check the live status.

Reference: Uttar Pradesh has developed a system that calculates the total payment, collects it from the investor, and then distributes the respective amounts to the concerned departments. This system supports both treasury and bank modes of payment collection. The payment is relayed to the respective departments on a real-time basis.

E. Comprehensive Dashboards Module

3.20. State SWS must provide the following dashboards:

1. SWS Performance (available without login for public)
2. Applicant (accessible to applicant, after login)
3. Incentive (accessible to applicant, after login)

i. SWS Performance Dashboard

3.21. Publish prominently on the SWS, a dashboard of the real time service wise status i.e. approved, rejected or under process; and average time taken/ being taken against prescribed SLA for each service.

3.22. The dashboards should allow the user to compare service wise, district wise trend over a period of time (selectable).

3.23. Use the template provided in **Annexure 3** as the standard format for the SWS Dashboard, ensuring uniformity.

ii. Applicant Dashboard

3.24. Publish status on the dashboard of each of the service sought through the CAF. The status should include service wise status i.e. approved, rejected or under process; time taken/ being taken against prescribed SLA; and fees paid.

3.25. The personalized dashboard must include a visible timer for active applications tracking progress against SLAs and a clear visual representation (e.g., flowchart or progress bar) of the application flow, highlighting the current stage.

3.26. Enable filtering options on the dashboard by department, approval type, timeline, and district, allowing stakeholders to access relevant data easily.

3.27. Clearly display the last data refresh date, with a preferred update frequency of real-time or at least every 2 hours to ensure accuracy.

3.28. A "Check Application Status" feature may be enabled without login with mobile based authentication as an added feature, allowing applicant to query the real-time status of any application using its unique application reference number.

3.29. Use **Annexure 4** to provide the standard format for the applicant dashboard, including filters, indicators and formula for dashboard update frequency.

iii. Incentives Dashboard

3.30. Develop a user-friendly 'Know Your Incentive' tool, before and after login, featuring a guided questionnaire to help applicant estimate eligibility and benefits under applicable State and Central schemes.

3.31. Provide an incentive calculator, before and after login, to estimate financial entitlements under capex-linked, tax-based, or sector-specific incentive schemes, using predefined policy parameters.

3.32. Build a structured tracking system to monitor the status of incentive applications - covering all stages including submitted, verified, approved, sanctioned (order to be uploaded on applicant dashboard), disbursed and pending.

3.33. Display real time performance metrics such as:

1. Total number of incentive applications received and approved
2. Average, median, minimum, and maximum days taken for processing
3. Current status with live data refresh

3.34. **Use Annexure 5** for incentive dashboard template.

F. Inspections Module

3.35. Develop inspection module associated with the respective approval so that applicants are able to self-report status against respective provision of the inspection checklist by uploading video/ photographs/ documents with explanation in text.

3.36. Enable digital reporting of inspection/ validation of inspection/ upload of inspection reports, including photos, videos, and digital signatures of the inspecting officer, with automated reminders, in case inspection reports are not made available to applicants to view and download inspection reports within 24 hours.

3.37. Applicant should be allowed to provide update/ response in case inspector has made some observation against the respective provision of the inspection checklist, before finalisation.

3.38. SWS should provide facility of a real-time inspection scheduler with risk-based logic, integrated with the Central Inspection System (CIS).

3.39. Publish on SWS details of recognised third-party inspectors and provide, facility to upload the inspection report. SWS should have facility to allocate inspections to officers and third parties.

3.40. There should be a pre-defined inspections checklist for each applicable service/ clearance, clearly outlining risk-based inspection criteria, procedures, and compliance triggers. Model checklist is illustrated in Annexure 6 for select services. On similar lines model checklist for rest of the services listed in Annexure 9 is to be developed and implemented.

3.41. Develop a dashboard to display:

1. Total number of inspections conducted
2. Number of enterprises exempted based on self-certification
3. Number of enterprises exempted based on third-party certification
4. Average and median time taken for inspections
5. Percentage of reports made available within and beyond 24 hours

The dashboards should be able to allow comparative date district wise and trend over a period of time (selectable).

3.42. Use **Annexure 6** to develop the standard inspection report format to maintain uniformity.

G. Guidance Module

3.43. Provide FAQs for the services provided under the SWS. Use AI Chatbots wherever feasible to supplement the FAQs.

3.44. Provide audio video training modules and user guides to help users to effectively use the SWS.

3.45. Develop a user-friendly interface for applicant to submit queries related to services, or processes under the SWS.

3.46. Implement an automated acknowledgement system that generates a ticket number and resolution due date, communicated via email or SMS upon query submission. SLA for query resolution may be defined as 7 working days or lesser.

3.47. Track all queries in the backend with real-time performance metrics, including notified resolution timelines, number of queries logged, number of queries resolved and pending; average, median, minimum, and maximum time taken for resolution.

3.48. Enable query data analysis in the backend using text analytics to identify common or repeat queries and periodically update the FAQs or service guidelines based on insights.

3.49. Establish regular monitoring mechanism, and limit frequency of the queries raised.

3.50. Use **Annexure 7** to develop sample ticket tracking interface with fields such as service name, ticket number, status, and expected resolution timeline.

H. Grievances & User Feedback Module

3.51. A dedicated help desk/ call centre should be established to support the applicant on the processes and resolution of grievances, including collection of feedback after the grievance has been resolved.

3.52. Develop a grievance interface that allows users to file complaints by selecting the issue type and concerned department along with the facility to upload supporting documents and generation of acknowledgment upon submission.

3.53. Implement automated grievance routing based on predefined parameters such as the nature of the service, geographical jurisdiction, and department without manual intervention.

3.54. Capture the reason for grievance at the time of filing and enable post-resolution feedback, allowing users to rate their experience on a defined scale. The system should also provide an option to file a rejoinder in cases where the grievance is not resolved to the satisfaction of the complainant.

3.55. SWS should seek structured feedback from applicant after service delivery as well as grievance response, using a standardised 5-point Likert scale and comment box.

3.56. SLA for resolution of grievance may be defined as 7 days or lesser, with a provision to auto escalate it to the Head of the Department, in case it is not resolved within timeline. Auto escalation mechanism should have 3 levels, i.e., Secretary, Chief Secretary and the Hon'ble Chief Minister.

Reference: Tamil Nadu has developed 'Biz Buddy' mechanism, which is the dedicated industrial helpdesk, to resolve issues and challenges faced by the applicants in a time-bound and accountable manner.

3.57. Track and display key grievance performance indicators, including:

1. Notified timelines for resolution as per the Public Service Guarantee Act
2. Number of grievances logged, resolved, and pending
3. Average, median, minimum, and maximum time taken for resolution
4. Status of real-time updates and adherence to defined service level agreements

3.58. SWS should provision auto-closure functionality for inactive grievances with suitable safeguards

3.59. Automatically flag services receiving over 30% negative feedback over a two-month period, prompting review and escalation

3.60. An appellate mechanism must be established and made accessible through the Single Window System for applicant to appeal applications rejected by departments. A valid reason should be provided, in case any application is rejected.

Reference: Telangana and Uttar Pradesh have developed mechanisms that define the process, timelines, and responsible authority for appeals, which are clearly specified, published, and adhered to.

3.61. Use **Annexure 8** for templates.

4. Desirable Modules

A. Land Bank Details

4.1. A GIS-based interface may be made available on the SWS that displays available land parcel details, including size, land use category, geographic coordinates, and connectivity by road, rail, and air. The interface may also reflect available infrastructure such as power supply, water availability, road access, and proximity to key logistics nodes.

4.2. This facility may provide specific details regarding plug-and-play infrastructure availability, including status of site-level readiness such as internal roads, common effluent treatment plants (CETPs), power sub-stations, water connections, waste disposal systems, and telecom/IT connectivity. Parcels offering such infrastructure may be distinctly marked and filterable.

4.3. It may include private industrial parks, industrial estates, and logistics clusters in the land bank interface, with direct hyperlinks to the developer's website or contact details of the designated nodal officer for investment queries.

Reference: Gujarat has provided details of the available land bank including. details of industrial development corporation estates, special investment regions, special economic zone, private industrial parks and sectoral parks in public domain.

4.4. It may integrate the State land bank portal with the India Industrial Land Bank (IILB) using API or Single Sign-On (SSO) mechanisms to enable seamless data exchange and national-level investor visibility.

4.5. Use **Annexure 10** for GIS Dashboard template along with sample GIS metadata may be referred.

B. Mobile & Multilingual Interface

4.6. Integrating a Mobile & Multilingual Interface within the SWS is for expanding its accessibility, enhancing usability, and empowering diverse investor groups across urban and rural geographies, particularly for MSMEs and local entrepreneurs. SWS may provide multilingual support across all modules (forms, dashboards, alerts, help content) in English, Hindi, and relevant regional languages to enhance inclusivity for MSMEs and local entrepreneurs.

4.7. SWS may allow seamless switching of language preferences across user journeys and provide onboarding tutorials in regional languages to support first-time users.

Reference: Tamil Nadu has launched multilingual mobile versions of their SWS platforms, demonstrating improved investor reach and engagement.

C. Guided User Assistance Tools

4.8. Guided User Assistance Tool is to support user journey/ navigation on the portal on the basis of type of user visiting the portal, like new user, returning user, officer, seeking information only, etc. These tools improve user experience by reducing confusion, minimizing errors in submissions, and helping users—especially first-time and small-scale investors—complete tasks with accuracy. SWS may provide tailored assistance based on user inputs such as sector, service type, stage of business, and application complexity to ensure relevance and ease of use.

D. AI-Powered Chatbot

4.9. SWS may integrate an AI-driven chatbot into the SWS to deliver round-the-clock, real-time assistance to investors and users across a wide array of services, ensuring seamless support without the need for human intervention. Chatbot may provide robust language processing capabilities and train it on comprehensive regulatory frameworks, historical user queries, and service-specific FAQs to enable accurate, context-aware responses.

Reference: Tamil Nadu's Single Window platform features an AI-enabled virtual assistant that operates in both English and Tamil.

E. Intent to Invest Module

4.10. SWS may provide a facility to applicants to register their intention to invest to enable prospective investors to formally express preliminary interest in establishing or expanding business operations in a State/ UTs well before commencing the formal approval process. This facility may capture key pre-application data points such as preferred sector, proposed investment amount, preferred project location(s), employment generation potential, and tentative implementation timelines, offering governments an early view of investor needs and plans. Use **Annexure 11** as standard template.

Reference: Uttarakhand has provided facility for submission of intention to invest along with the public dashboard showcasing leads, MoUs signed, MoUs grounded, proposed employment and investment. The module also provides applicant the opportunity to track investment once MoU is signed till the project grounding takes place.

5. State SWS Technology Stack

5.1. The technology stack in this section refers to the set of software tools and digital infrastructure to build and run the SWS, including the front-end, back-end, databases, APIs, cloud hosting, and security layers. It defines how the system works in the backend and ensures that it is scalable, secure, and future-ready.

5.2. The State SWS tech stack serves as a reference model for States, providing guidance on designing a modern, integrated system. While some States have their own legacy systems or may prefer alternative tools, the State SWS tech stack demonstrates how to ensure scalability and interoperability. The NSWS tech stack is also discussed in the following section.

5.3. Typically, State SWS may adopt the core architectural principles for system development, namely modularity, interoperability, and API-based integration, as illustrated below:

1. **Modular:** Structured as independent components (e.g., CAF, dashboards, communication), so they can be upgraded or modified without affecting the rest of the system.
2. **Interoperable:** Ability to exchange data with other platforms, including NSWS, State department IT systems, and central databases, regardless of underlying technology.
3. **API-driven:** Using APIs to enable secure, real-time communication between systems, replacing manual or file-based processes.

5.4. Following these principles enables States to adopt technologies suited to their specific context while ensuring nationwide consistency, a seamless investor experience, and integration readiness. However, the features and requirements mentioned in the stack are indicative. States may adopt this stack or implement an upgraded version when developing or upgrading their SWS. The choice of technology stack however, should align with state-specific needs and support future scalability.

5.5. The detailed modules of the proposed State SWS tech stack are illustrated below, with specific guidance for developing the SWS:

A. Integration Module

5.6. This module ensures that the SWS can automatically share information with the IT systems of various ministries and departments. Today, many departments operate in silos, requiring businesses to submit the same information multiple times. The integration module removes this duplication by enabling seamless digital communication between systems. While designing the module, the following system requirements may be considered -

1. Once an investor submits the application, the system should identify which departments need the data.

2. It then sends the relevant information to each department automatically, without any manual effort.
3. The system adapts to different departmental setups — sending the data in a usable form even if their IT systems are outdated or lack integration.
4. Depending on the department's setup, data is either pushed to them or made available for them to pull.
5. In case of any failure during data transfer, the system retries automatically and notifies the backend team only if needed.
6. Departments that are infrastructure ready can also receive updates in real-time.

5.7. Technology specifications are listed as under:

1. A standard API framework is followed across departments; custom adapters are created where needed.
2. An orchestration engine maps CAF data to the required formats for each department.
3. Supports both push (SWS sends) and pull (departments fetch) data exchange models.
4. For systems without APIs, raw data is pushed directly.
5. A dedicated endpoint allows departments to share back application status.
6. All data exchanges are logged and retried automatically if failures occur.
7. JWT-based secure authentication is used for system-to-system communication.
8. Optional message queue support is available for departments with real-time readiness.

B. Communication Module

5.8. The module serves as the central digital channel between Ministries/Departments and investors, facilitating seamless and traceable exchange of queries, clarifications, and grievances. It leverages secure, multi-channel and real-time technologies to support two-way interaction, automate workflow triggers, and ensure transparent resolution tracking. This approach enhances user experience, improves grievance redressal efficiency, and enables States and UTs to monitor and address investor concerns in a timely, auditable manner. While designing the module, the following system requirements may be considered –

1. Enables officials to raise queries or clarification requests during application review.
2. Investors can respond with comments, documents, or corrections as needed.
3. Allows grievance submission directly through the platform.
4. Common use cases include status updates, document re-uploads, CAF edits, and payment clarifications.

5. Departments are able access the module through their internal portal with secure credentials.
6. Only relevant CAF fields become editable when flagged by departments.
7. Communication is displayed in a clear, threaded view for traceability.

5.9. Technology specifications are listed as under:

1. In-platform messaging and file upload features tied to application IDs.
2. Role-based access with department-specific codes for secure login.
3. Dashboard showing all in-process applications and related communication.
4. Real-time notifications sent via SMS, email, or in-app alerts.
5. Integrated with CAF and document repository for seamless data handling.
6. Event-driven system supports escalations and response tracking.
7. Threaded conversation interface with full audit trail.

C. Search Module

5.10. The module helps users quickly and easily find all types of information within the SWS. With support for multiple languages and advanced filtering, investors and departments can efficiently search for documents, regulatory details, FAQs, and service information. By connecting to real-time regulatory updates, States and UTs can offer an inclusive, current, and user-friendly experience. While designing the module, the following system requirements may be considered –

1. Allow users to search and access documents, FAQs, license information, and system pages in one place.
2. Ensure fast and relevant search results, tailored to the user's context or application stage.
3. Support exporting search results, FAQs, and KYA content in downloadable formats.
4. Search results remain up to date with regulatory changes pulled in automatically.
5. Offer multi-language support and accessibility features for broader usability.
6. Track search usage to improve relevance and content over time.

5.11. Technology specifications are listed as under:

1. NLP-powered search engine to understand user queries and return accurate results.
2. Metadata-based filtering to personalize outputs (e.g., based on sector or application).
3. PDF generation with digital stamps and e-signatures for exportable search content.
4. Real-time API/webhook integration (e.g., with e-Gazette) to keep content current.
5. WCAG 2.1-compliant design with screen reader and text-to-speech support.
6. Multilingual interface for regionally diverse users.

7. Analytics layer to capture search behaviour and optimize future responses.

D. Reporting & Dashboard Requirements

5.12. The module helps users and administrators easily track, analyse, and visualize all key activities and data within the SWS. It offers real-time dashboards, customizable reports, and instant alerts to monitor service status, applications, payments, inspections, incentives, and more. By supporting quick data exports, flexible access for different users, and clear performance insights, States and UTs can improve transparency, accountability, and decision-making for both investors and departments. While designing the module, the following system requirements may be considered –

1. Dashboards show key application data such as license status, CAF progress, department-wise pendency, and fee receipts.
2. MIS reports can be downloaded in Excel format with pivot and drill-down capabilities.
3. Real-time tracking and alerts ensure SLA adherence and timely resolution of applications.
4. Stakeholders can configure dashboards with custom KPIs, views, and refresh intervals.
5. Export options for visual reports are available in PDF, Excel, and CSV formats.
6. Administrators can view user behaviour and system usage similar to web analytics tools.
7. Customizable views support role-based access — for applicants, departments, and public users.

5.13. Technology specifications are listed as under:

1. Excel-based reporting engine with pivot tables and drill-down support.
2. Real-time dashboards powered by data streaming tools (e.g., Kafka, Kinesis).
3. Role-based dashboard views delivered via secure RESTful APIs and microservices.
4. Alerts and SLA tracking driven by event triggers and status change monitoring.
5. Export modules support visual formats (PDF, XLSX, CSV) for reports and dashboards.
6. Admin tracking tools resemble Google Analytics — capturing session-level behaviour.
7. Prometheus/Grafana (or equivalent tools) used for threshold monitoring and performance alerts.
8. Configurable refresh logic (real-time or scheduled every 2 hours) ensures data remains up to date.
9. Dashboard content dynamically adjusts based on user roles through RBAC controls.

E. Cross Cutting Services

5.14. Cross Cutting Services are foundational technical components that operate across all modules of the SWS to ensure optimal system performance, robust security, and a consistent user experience. These services provide the necessary backbone for logging, monitoring, compliance, and automated operations, enabling States and UTs to maintain a reliable, accessible, and future-ready digital environment. While designing the module, the following system requirements may be considered –

1. Ensure uniform security, performance monitoring, and audit logging across all modules.
2. Guarantee accessibility compliance for differently abled users across devices.
3. Enable smooth access on mobile and desktop via responsive, mobile-first design.
4. Automate testing and deployment to ensure faster, safer rollouts of new features.
5. Provide testing environments for departments to review updates before go-live.
6. Enable safe integration of new features without affecting existing modules.
7. Maintain secure data handling and access protocols to protect sensitive information.

5.15. Technology specifications are listed as under:

1. WCAG 2.1+ and ARIA standards implemented for screen reader and accessibility compliance.
2. All front-end modules designed as Progressive Web Apps (PWA) with mobile responsiveness and offline support.
3. CI/CD pipelines using Jenkins or GitHub Actions to automate code build, test, and deployment.
4. Sandbox and UAT environments provisioned via Infrastructure as Code tools like Terraform or CloudFormation.
5. Centralized logging using ELK stack or AWS CloudWatch to track activity across modules.
6. Containerization via Docker and Kubernetes for modular updates and service isolation.
7. API Gateway ensures secure, version-controlled, authenticated access to microservices.
8. Data encryption at rest and in transit, with access controls and periodic VAPT for system security.

F. Information Security

5.16. Information Security forms the backbone of trust and reliability in the SWS, protecting sensitive investor and departmental data from unauthorized access, breaches, and cyber threats. By enforcing robust encryption, strict authentication, and secure data storage, States and UTs can ensure compliance with national standards, maintain data integrity, and provide confidence to all stakeholders interacting with the platform. While designing the module, the following system requirements may be considered –

1. All user access is restricted to authenticated users only.
2. Internet-facing communication is secured with encryption to prevent tampering.
3. Documents and user data are stored securely to prevent unauthorized access.
4. Security logs and event data are retained for compliance and audit readiness.
5. User identity and session management follow secure, standards-based protocols.

5.17. Technology specifications are listed as under:

1. OAuth2 or JWT used for stateless, secure user authentication and session control.
2. HTTPS (SSL/TLS) encryption enabled for all external traffic.
3. Role-based access controls (RBAC) ensure only authorized users can access protected modules.
4. Secure data storage using encrypted file systems or cloud-native encryption features.
5. Security event logging and monitoring systems store and analyse access patterns over time.

G. System Architecture Overview - Key Features

5.18. This module ensures that the SWS is built on a secure, scalable, and modular foundation. By organizing core functions into distinct layers, using token-based authentication, and enforcing encrypted data flows, the architecture provides strong security, easy integration with external systems, and flexible support for evolving business needs. This layered approach helps States and UTs efficiently manage system performance, maintain data integrity, and future-proof the platform for continuous enhancements. While designing the module, the following system requirements may be considered –

1. Ensure modular separation between system layers — from user interface to data storage.
2. Implement secure data flow and processing at every level of the platform.
3. Use a virtual private environment to isolate system operations and network traffic.

4. Enable secure and structured communication with external systems.
5. Support transformation between different data formats to ensure compatibility.
6. Maintain no caching of sensitive data and enforces secure access at all levels.

5.19. Technology specifications are listed as under:

1. Stateless, declarative security model with token-based access using OAuth2 or JWT.
2. HTTPS encryption across all layers to secure data in transit.
3. Virtual Private Cloud (VPC) used for isolating infrastructure with custom IP, subnet, and routing.
4. Web layer performs initial authorization and routing of requests to backend services.
5. Microservices and APIs handle business logic and orchestration of application processes.
6. External interface layer supports integration with third-party systems using a generic adapter model.
7. Persistence layer securely stores applicant data, documents, and transaction records.
8. Format transformation services enable SOAP–REST, XML–JSON conversions for interoperability.
9. No caching of sensitive information across layers to ensure compliance and privacy.

H. Information Security Requirements

5.20. The requirements establish a comprehensive, multi-layered defence framework to safeguard all data, applications, and infrastructure within the SWS. By implementing rigorous standards for authentication, authorization, and encryption, it ensures confidentiality, integrity, and availability of sensitive information in line with national data protection and IT laws. This approach enables States and UTs to maintain compliance, prevent cyber threats, and guarantee uninterrupted, trustworthy services for all users and stakeholders. While designing the module, the following system requirements may be considered –

1. Ensure confidentiality, integrity, and availability of data through end-to-end protection.
2. Secure all system layers — application, network, database — from internal and external threats.
3. Use strong authentication, access control, and encryption to prevent unauthorized access.
4. Maintain audit trails, system logs, and access reports for traceability and compliance.

5. Support regular security monitoring, threat detection, and response mechanisms.
6. Adhere to legal and regulatory standards, including the IT Act and CERT-In guidelines.
7. Implement a robust backup and disaster recovery plan to ensure business continuity.

5.21. Technology specifications are listed as under:

1. Multi-factor authentication (MFA), PKI, and role-based access control for secure user access.
2. Token-based security (OAuth2, JWT) and HTTPS encryption for all web communications.
3. Data encryption (AES-128/3DES) for both in-transit and at-rest protection, including database-level encryption and vaulting.
4. OWASP-compliant application layer security with protection from XSS, SQLi, replay attacks, etc.
5. Logging, audit trails, and alerting using tools like ELK stack, with defined retention policies.
6. Intrusion prevention and detection systems (IPS/IDS), next-gen firewalls, WAFs, and antivirus/anti-spam at gateway and network levels.
7. System-wide VAPT, ISO 27001 compliance, and security event correlation with third-party feeds (botnets, vulnerabilities, geolocation).
8. Enforcement of password policies and encrypted password storage using SHA256 or equivalent.
9. Secure APIs supporting WS-Security, XML firewalls, secure conversion, and non-repudiation.
10. Behavioural anomaly detection, weighted alerting, and auto-response to high-risk events.
11. Real-time ACL enforcement, user rights management, and security analytics.
12. Full BCP/DR strategy with RTO and RPO compliance, and encrypted backups.

I. Web Service Threat Protection

5.22. These features will help to proactively identify, filter, and mitigate sophisticated threats targeting the SWS portal during web service interactions. By implementing advanced content inspection, validation, and attack prevention mechanisms for both XML and JSON payloads, the system safeguards against injection, forgery, flooding, data tampering, and other cyber-attacks. This layered protection ensures the integrity, reliability, and resilience of all digital services delivered to users across States and UTs. While designing the module, the following system requirements may be considered –

1. The system should automatically detect and block unusual or harmful traffic before it reaches any core services.

2. All data exchanges should follow strict rules to ensure only clean and valid inputs are accepted.
3. The platform should be capable of stopping attacks without human intervention, ensuring 24x7 protection.
4. Rules for identifying risky patterns or suspicious messages should be centrally managed and updated regularly.
5. The system should ensure that no individual service or user can overload or compromise platform performance.

5.23. Technology specifications are listed as under:

1. API Gateway with Web Application Firewall (WAF): To screen all incoming requests for known attack patterns.
2. Schema-based Payload Validation: Enforces strict structure for XML/JSON inputs to prevent malformed content.
3. Message Signing and Encryption: Ensures data authenticity and prevents tampering during transmission.
4. Threat Detection Engine: Monitors traffic behaviour and blocks anomalies in real time using pre-set rules.

J. Message Snooping

5.24. The message snooping is intended to detect and prevent unauthorized access, manipulation, or leakage of data as it transits through the SWS and its databases. By defending against injection attacks, and schema manipulation, this layer ensures that sensitive messages and transactions remain secure and unaltered. Such protections are essential for maintaining the confidentiality, and trustworthiness of digital interactions across all States and UTs. While designing the module, the following system requirements may be considered –

1. The system should monitor all messages in transit to ensure that sensitive data cannot be read or altered.
2. Only valid, expected inputs should be accepted by the platform — with checks applied at every layer.
3. Every request should be scanned to ensure that it doesn't attempt to bypass system rules or mislead downstream services.
4. All outgoing data should be reviewed to ensure that confidential information is not accidentally exposed.
5. Protection must extend to both internal messages (within modules) and external integrations (with department systems).

5.25. Technology specifications are listed as under:

1. Input Validation Engine: Filters out unsafe inputs using predefined rules and validation logic.
2. Message Encryption and Tokenization: Secures messages in transit and masks sensitive fields.

3. Intrusion Detection Layer: Detects anomalies like injection attempts, routing manipulation, and schema misuse.
4. Outbound Data Scanning Tools: Analyse outgoing messages for sensitive content or policy violations.

6. National SWS Technology Stack

6.1. This section informs about the digital architecture of the NSWS. The objective is to help States understand the technology for seamless integration and exchange of data. Aligning with NSWS principles will enable smoother integration and a better investor experience. The stack details are illustrated below.

6.2. Frontend (User Interface) Technologies

1. Drupal: Manages website content like homepages and state-specific pages.
2. React JS, HTML, CSS, Node: Powers the interactive parts of portals for users and ministries.
3. Redux, Middleware, Reducers, Hooks: Tools that manage data flow and state in the user interface.
4. Adobe XD, Photoshop Online: Used to design how the platform looks and feels.

6.3. Backend Technologies

1. Spring Boot 3.0 (Microservices): Builds independent backend services that power different parts of the portal.
2. Key cloak: Manages login and user identities securely.
3. AWS OpenSearch: Speeds up search and dynamic content loading.
4. Hazel cast: Helps move form data quickly and securely.
5. Apache Kafka (AWS MSK): Manages background communication between systems.
6. AWS Kafka Connect: Transfers data for reporting and analytics.
7. Spring Cloud Gateway, Zuul Gateway: Controls traffic and secures communication between systems
8. Grafana, Kibana: Monitor and visualize system performance and logs.
9. Glow Root: Tracks how well applications perform.

6.4. Databases

1. MySQL RDS: Stores data for ministry-related services.
2. Aurora RDS: Stores data for investor/business-related services.
3. PostgreSQL: Used for dashboards and detailed reports.
4. Document DB: Stores documents and files in a flexible format

6.5. Infrastructure (Cloud & Hosting)

1. AWS CloudWatch: Monitors the health of apps and systems.
2. S3, EBS, EFS: Stores files, backups, and data used by the system.
3. AWS WAF, FortiGate Firewall: Protects against online attacks and filters harmful traffic.
4. CloudFront: Speeds up content delivery to users.

5. EC2: Virtual machines that run backend services.
6. Guard Duty, AWS Inspector: Automatically scan for threats and vulnerabilities.
7. AWS EKS: Manages deployment of backend microservices using containers.

6.6. Tools and Utilities

1. Jira, Freshdesk: Manage development and customer support tasks.
2. Power BI: Creates visual reports and dashboards.
3. Eclipse, IntelliJ, VS Code: Tools developers use to write and test code.
4. MySQL Workbench, Robo3T: Help manage databases.
5. Jenkins, SonarQube: Automate testing and ensure good code quality.
6. GitLab, SVN: Store and manage code versions safely.
7. Burp Suite: Scans for security problems in web apps.
8. Google Analytics & Tools: Track and analyse user activity and search performance.
9. Postman, Selenium: Test APIs and automate tests.
10. FortiClient: Secure VPN for connecting to the system.

7. Annexures (Templates and Guidelines for Module Implementation)

Annexure 1: Know Your Approval (KYA) Module

This annexure provides the standardized output structure for the KYA module, ensuring uniformity in format, display logic, and applicant experience across all States and UTs. It aims to guide the development of a dynamic interface for identifying applicable approvals based on applicant profile inputs.

A. Applicant Input Summary Table *(Illustrative, Approval specific questionnaire needs to be added so that nothing else exists)*

Field	Description
Sector	Selected industry sector (e.g., Food Processing, Construction)
Location	State/District selected by applicant
Risk Category	Assigned based on sector, scale, and environmental impact
No. of Employees	Self-declared workforce count
Firm Size	Micro, Small, Medium, or Large, based on investment or turnover
Applicant Type	Domestic, Foreign, or Joint Venture

B. Approval Output Format *(Illustrative)*

Unique KYA Reference ID	Approval Name	Department	Stage of Business	SLA (Days)	Steps	Documents Required	Fees (INR)	Application Link	Legal Provision
KYA-LA-001	Factory License	Labour	Pre-Establishment	15	3	PAN, Building Plan	2,000	[Apply Here]	Factories Act, Sec. 6
KYA-EC-002	Consent to Establish	Environment	Pre-Establishment	30	5	EIA Report, Site Plan	5,000	[Apply Here]	Water Act, Sec. 25

Unique KYA Reference ID	Approval Name	Department	Stage of Business	SLA (Days)	Steps	Documents Required	Fees (INR)	Application Link	Legal Provision
KYA-MU-003	Building Permit	Industrial Development Corp.	Pre-Construction	21	4	Land Title, Architect Plan, NOCs	3,500	[Apply Here]	Municipal Corp Act, Sec X
KYA-FS-004	Fire Safety Certificate	Fire Services	Pre-Operation	14	3	Building Plan, Fire Safety Layout	1,000	[Apply Here]	State Fire Act, Sec Y

C. Mandatory Functional Features

i. All outputs must include a legal disclaimer confirming the finality of the list as per the State's notified regulations.

ii. A unique KYA Reference ID and timestamp must be included on each generated result.

a) Results must be downloadable in the PDF format.

D. Filtering and Display Logic

i. A dynamic filter tree must be implemented for conditional logic based on applicant inputs.

a) Example Rule: If Sector = Retail AND Building Height < 15m → Exclude Fire NOC

ii. All services excluded based on logic must be flagged in backend logs.

iii. SLA bands must be color-coded:

a) Green: SLA ≤ 7 days

b) Yellow: SLA between 8–14 days

c) Red: SLA > 14 days

iv. Approvals should be marked with icons to denote Mandatory or Desirable status.

E. Output Structure and Navigation Design

i. Display must be accessible pre-login.
ii. Post-search, applicant must be prompted to register/log in for saving results and initiating application.
iii. Each output screen should display:
    a) Applicant Input Summary
    b) Approvals Matrix
    c) Disclaimer and Notification/G.O. number
    d) Options to download and share the output

F. Operational Guidelines

i. Standard Disclaimer Format (to be adapted by States/UTs): This search result, generated from the Know Your Approvals (KYA) module on [Date] at [Time] (KYA Reference ID: [Unique KYA ID]), reflects the indicative list of applicable approvals and compliances as per notified laws and regulations of the Government of [State/UT Name], based on the information provided by the applicant.

G. Maintenance and Update Protocol

i. Quarterly review of approval logic and catalogue.
ii. Integration of new approvals/changes must occur within 30 days of issuance.
iii. A change log must be maintained, with date, nature of update, and source reference.

Annexure 2: Common Application Form (CAF) Module

This annexure provides the standardized template and logic framework for the Common Application Form (CAF) under the Single Window System. It is designed to ensure a uniform, responsive, and applicant-friendly application experience across all States and Union Territories.

A. Standardized Common Fields for CAF (*For illustration purposes only; denotes the minimum requirements)*

To ensure a baseline consistency and facilitate data sharing, the Common Application Form must, at a minimum, include provisions to capture the following standardized common fields. Many of these fields should be designed to auto-populate from the applicant registered profile (linked to SBID) where available, reducing redundant data entry. The dynamic nature of the CAF will then add sector-specific and approval-specific fields based on KYA outputs and further applicant inputs.

I. Basic Entity Details:

1. Name of the Enterprise/Unit: (As per PAN/GSTN or proposed name)
2. PAN of the Enterprise/Individual: (Mandatory)
3. GSTIN of the Enterprise: (If applicable/available)
4. Constitution of Business: (e.g., Proprietorship, Partnership, Private Limited Company, Public Limited Company, LLP, Society, Trust, HUF, etc. – from a predefined list)
5. Date of Incorporation/Registration (if applicable):
6. Corporate Identification Number (CIN) / LLP Identification Number (LLPIN): (If applicable, based on Constitution)
7. Udyam Registration Number: (If applicable, for MSMEs)

II. Registered Office Address:

1. Complete Address Line 1:
2. Complete Address Line 2 (Optional):
3. State:
4. District:
5. City/Town/Village:

6. PIN Code:

III. Proposed Unit / Operational Address (If different from Registered Office):

1. Complete Address Line 1:
2. Complete Address Line 2 (Optional):
3. State:
4. District:
5. City/Town/Village:
6. PIN Code:
7. Is the proposed unit located in a notified Industrial Area/Park/SEZ? (Yes/No)
8. If Yes, Name of Industrial Area/Park/SEZ

IV. Authorized Signatory / Primary Contact Person Details:

1. Full Name:
2. Designation:
3. Mobile Number: (For OTP verification and communication)
4. Email ID: (For communication and notifications)

V. Broad Proposed Activity Details (To be further refined by KYA and dynamic sections):

1. Main Business Activity/Sector: (High-level selection, aligned with KYA categories)
2. Brief Description of Proposed Project/Activities: (Max 250-500 characters)
3. Proposed Total Investment (Plant & Machinery / Equipment): (Approx. INR)
4. Proposed Direct Employment (Numbers):

Note: Fields like "Single Business ID (SBID)" will be system-generated upon profile creation and linked, rather than being an applicant input on the initial CAF for a new entity.

B. Applicant Input Mapping Table *(Illustrative)*

Field	Description	Input Type	Dependency Rule
Industry Type	Sector of business (e.g., Textile, Electronics)	Dropdown	Determines applicable licenses
Business Location	State, District, Industrial Area	Dropdown	Determines jurisdictional routing
Enterprise Size	Micro, Small, Medium, Large	Auto-computed	Based on investment and turnover inputs
Employment	Total number of employees	Numeric	Impacts labour-related approvals
Power Requirement	Total sanctioned load required (in kW)	Numeric	Impacts electricity connection workflow
Land Area Required	In square meters or acres	Numeric	Triggers land allotment service

C. Approval Routing and Logic Tree (Illustrative)

KYA Output /Applicant Input	CAF Section / Specific Form to be Displayed	Associated Department(s)
KYA indicates “Factory License” required	Section: Factory License Application Details	Labour Department
KYA indicates “Consent to Establish”	Section: Environmental Consent Application	Environment / Pollution Control Board
Input: Land Required = Yes	Section: Land Allotment Request Form	State Industrial Development Corporation
Input: Foreign Investment = Yes	Section: FDI Declaration / Relevant Central Forms	DPIIT / RBI / Relevant Central Ministry
Input: Building Height > X meters	Section: Fire Safety NOC Application	Fire Services Department
KYA indicates “Electricity Connection” required	Section: New Electricity Connection Form	State Electricity Board
KYA indicates “Water Connection” required	Section: Water Supply Connection Application	Public Health Engineering Department

KYA Output /Applicant Input	CAF Section / Specific Form to be Displayed	Associated Department(s)
KYA indicates "Trade License" required	Section: Trade License Application	Municipal Corporation / Urban Local Body
Input: Hazardous Chemicals = Yes	Section: Hazardous Waste Management Consent	Environment / Pollution Control Board
KYA indicates "Building Plan Approval" required	Section: Building Plan Approval Form	Town & Country Planning Department
Input: Import/Export License needed	Section: IEC Application Form	Directorate General of Foreign Trade (DGFT)
KYA indicates "Shops & Establishments Registration"	Section: S&E Act Registration Form	Labour Department

Logic Implementation:

i. Approval identification is based on mapped rules from Annexure 1 and KYA (Annexure 2)
ii. Logic tree must dynamically display only relevant approvals based on selected inputs

D. Mandatory Functional Features

i. Auto-fill non-sensitive fields using data from applicant profile (post-login)
ii. Group approvals by department with toggles to expand/hide section
iii. System must auto-generate a unique CAF Reference ID upon submission
iv. Backend must auto-distribute CAF data to relevant departments using API
v. Application summary must be downloadable in:
    a) PDF (with digital stamp)
    b) Word (editable)
    c) Excel (structured service summary)

E. Query and Escalation Framework
   i. Departments must raise all queries within 7 calendar days of CAF submission
   ii. Only one additional round of queries permitted, upon approval by next higher level
   iii. SLA breach triggers auto-escalation to designated authority with email/SMS alerts

F. Maintenance and Update Protocol
   i. CAF logic tree must be reviewed bi-annually or as per changes in regulation
   ii. System must log all changes to the routing logic with version/date
   iii. Archived CAF submissions must be retained for five years
   iv. Applicant must be notified of any service-level changes impacting active applications

G. Operational Notes
   i. All departments must recognise the CAF as a valid and complete application form
   ii. States must notify the CAF as a centralised intake form via official Government Order (G.O.)
   iii. CAF Reference ID must be used for all future correspondence across systems and approvals

Annexure 1A: List of indicative APIs in Central Ministries

Ministry	Organization	API Name	Services
Ministry Of Finance	Total Publishers: 15	Securities and Exchange Board of India	Empanelment Certificate
		State Bank of India	Form 16
			SBI InnoHub
		Invest India	Startup India Recognition Certificate API
		Union Bank of India	Form 16
			Loan Interest Certificate
			Interest Certificate
			Account Statement
		Public Financial Management System (PFMS)	Get NSP Payment Status
			Get Bank Detail
			Get Payment Detail Status
		National Payments Corporation of India (NPCI)	Unified Payments Interface - UPI
		PFRDA (Protean)	Account Statement
			ePRAN Card
		UCO Bank	TDS Certificate
		Punjab National Bank	Account Statement
		Punjab and Sind Bank	Account Statement
			Interest Certificate
			TDS Certificate
		Indian Overseas Bank	Form 16

Ministry	Organization	API Name	Services
			Loan Statement
			Account Statement
			Interest Certificate - Home Loan
		Indian Bank	Interest Certificate
			Nomination Certificate
			E-Passbook Service
		Central Sector Interest Subsidy Scheme (CSIS)	CSIS Claim Details API
			CSIS Bank Names List API
		PCDA(Pension) Allahabad	Pension Certificate
		Total APIs: 30	
Ministry Of Defence	National Disaster Response Force	ID Card	
		Gallantry Awards	Get the inspirational audio page details in the gallantry awards dept
			Get the war history details in the gallantry awards department
			Get the motivational video page details in the gallantry awards dept
			Get the pdf about emagazine in gallantry awards department
			Memory museum page info in gallantry awards department
			Get the info about the gallantry awards dept
			Get the details of all the award categories in gallantry awards
			Log into the gallantry awards dept using this API

Ministry	Organization	API Name	Services
		NAVPEN NAVAL PENSION OFFICE	Experience Certificate
			Graduation Certificate
			Class X / Matriculation Passing Certificate
			Service and Release Certificate
			Certificate of Service
			Insurance - Miscellaneous
			Trade License/ Certificate
		Directorate of Personnel Officers (IAF)	Service Book Officers
			Certificate of Service
		IHQ MoD (Navy)-Directorate of Personnel Services	Gallantry Award Winner Identity Card/Certificate
		PCDA(NAVY)	MUMBAI
			Pension Certificate
	Total Publishers: 6	Total APIs: 20	
Ministry of Education	Digital Infrastructure for Knowledge Sharing - Diksha	Diksha Certificate	
			Content Search
			Content Read
		NCERT	Merit Certificate
		National Academic Depository (NAD)	Digi Locker National Academic Depository (NAD) APIs
	Total Publishers: 3	Total APIs: 5	

Ministry	Organization	API Name	Services
Ministry Of Commerce and Industry	Department for Promotion of Industry and Internal Trade (DPIIT)	Recognition Certificate	
		Coffee Board	Get Village List using this service
			Get Category using this service
			Get Application Type using this service
			Get Taluka List using this service
			Get State List using this service
			...and 4 more APIs
	Total Publishers: 2	Total APIs: 10	
Ministry Of Communication and IT	National Informatics Centre	Participation/ Appreciation Certificate	
		MeriPehchaan - National Single Sign-On (NSSO)	Notification of change consent
			Revoke by entity
			Find by entity
			Find by sub app
			Find by email
			...and 10 more APIs
	Total Publishers: 2	Total APIs: 16	
Ministry Of Home Affairs	Institute of Company Secretaries of India	Passing Certificate	
			ID Card
			Practice Certificate
			Membership Certificate

Ministry	Organization	API Name	Services
		Private Security Agency Licensing - PSARA	Grant of License (Regular/ Occasional/ Restricted)
	Total Publishers: 2	Total APIs: 5	
Ministry Of Consumer Affairs	Food And Public Distribution	National Consumer Helpline (NCH)	Dynamic Field API for NCH
			User Closer API for NCH
			Complaint Details API for NCH
			Company Remarks API for NCH
			Regulator Remarks API for NCH
			...and 20 more APIs
		Food and safety standards authority of India	Delhi: Registration Certificate
			Food Stuff License
	Total Publishers: 2	Total APIs: 27	
Ministry Of Labour and Employment	e-Shram - Ministry of Labour & Employment	This API provide the functional endpoint to Validate the UAN Number	
			This is an API used to generate JWT Token
		Ministry of Labour & Employment (eShram)	UAN Card
			Shramik Details API for eShram
			Blacklist API for eShram
			Delete Document API for eShram

Ministry	Organization	API Name	Services
			Download Document API for eShram
			...and 17 more APIs
	Total Publishers: 2	Total APIs: 24	
Ministry Of Petroleum and Natural Gas	Ministry of Petroleum and Natural Gas (IOCL)	Termination Voucher	
			LPG Subscription Voucher
		Ministry of Petroleum and Natural Gas (BPCL)	LPG Subscription Voucher
	Total Publishers: 2	Total APIs: 3	
Ministry Of Power	REC Limited	Bond Certificate	
		DAMODAR VALLEY CORPORATION	Health Card/ Certificate
			Pension Certificate
	Total Publishers: 2	Total APIs: 3	
Ministry Of Rural Development	The Pradhan Mantri Awaas Yojana - Gramin (PMAY-G)	Get convergence details using this service	
			Get citizen details using this service
			Get instalment details using this service
			Get panchayat wise pwl using this service
			Track the fto using this service
		LokOS - NRLM	Get all CLF based on Block-Arunachal Pradesh
			Get VO based on VO Code-Odisha
			Get VO based on VO Code-Madhya Pradesh

Ministry	Organization	API Name	Services
			Get CLF based on CLF Code-West Bengal
			Get all SHG based on Block-Madhya Pradesh
			...and 199 more APIs
	Total Publishers: 2	Total APIs: 209

Annexure 3: SWS Performance Dashboard

This annexure provides the standardized framework for the public-facing SWS dashboard. It is designed to promote consistency, transparency, and comparability in the reporting of service delivery performance across all States and Union Territories.

A. Public Dashboard Template

Service	Department	District	Time Period	Applications Received	Applications Approved	Applications Rejected	SLA Met (%)	Average Time (Days)	Fees Collected (INR)	Feedback Score (1–5)
Trade License	Labour Department	Lucknow	Apr–Jun 2025	245	220	12	92%	5.3	3,25,000	4.3

Filter Options:

i. Department
ii. Service
iii. District
iv. SLA Status (Met/Unmet)
v. Application Status (Received/Approved/Rejected)
vi. Time Period

B. Data Logic and Calculation Formulae

i. SLA Met (%) = (Applications Approved Within SLA ÷ Total Approved Applications) × 100
Example: If 220 applications were approved, and 202 of them were within SLA → (202 ÷ 220) × 100 = 91.8%
ii. Average Time (Days)
   - ✓ Formula: Average Time (Days) = Sum of Adjusted Time for all approved applications in the last 12 months/ Number of approved applications in that category

Where: Adjusted Time = (Approval Date - Submission Date) - Pendency Period
Pendency Period: Total time spent waiting for applicant action (e.g., document submission, response to queries).
Example: 220 applications, total time (Approval Date – Submission Date) = 1,166 days.
Total pendency periods = 330 days.
Sum of Adjusted Time = 1,166 – 330 = 836 days.
Average Time = 836/220 = 3.8 days

Notes:

- Calculation of (Approval Date – Submission Date): Record Submission Date (when application is received) and Approval Date (when application is approved) in consistent format (e.g., DD-MM-YYYY).
- Calculate difference in days using exclusive counting (do not include Submission Date or Approval Date). Example: 03-01-2024 – 01-01-2024 = 2 days.
- Pendency Tracking: Record start and end dates of pendency periods (e.g., when request for documents is sent and when applicant responds). Sum all pendency periods for each application to get total Pendency Period.
- Rounding: Round final average to one decimal place (e.g., 3.81 → 3.8 days).

iii. Average Fees (INR)

- ✓ Formula: Average Fees (INR) = Total fees collected for a specific service category/ Number of approved applications in that category
  Example: ₹3,25,000 collected from 220 approvals.
  Average Fees = 3,25,000/220 = ₹1,477
- ✓ Notes:
  - Data Scope: Use all available fee data for the category
  - Ensure fees correspond only to approved applications in the category.
  - Round final average to nearest integer (e.g., ₹1,477.27 → ₹1,477).

C. Visual Indicators and User Interface Features

i. SLA Status Indicators: Green (≥90%), Yellow (75–89%), Red (<75%)
ii. Timestamp displaying last data refresh prominently at the top-right corner
iii. Option to toggle between tabular and graphical views
iv. Export options enabled for PDF and XLSX formats

D. Operational Guidelines

i. Dashboard must reflect data retrieved from verified, API-integrated departmental systems.
ii. SLA definitions and benchmarks must be in line with those notified under the State Public Service Guarantee (PSG) Act.
iii. Feedback scoring mechanism must include moderation controls to eliminate spam or inappropriate content.
iv. All published data must be retained for a minimum of five years.

E. Maintenance and Update Protocol

i. Dashboard content must auto-refresh at least once every 2 hours or it should be real time.
ii. Complete data backups of dashboard tables must be maintained on a fortnightly basis.
iii. Public interface must visibly display the timestamp of the last refresh.

Annexure 4: Applicant dashboard

This annexure provides the standardized framework for the applicant-facing dashboard within the SWS. It is designed to ensure transparency, efficiency, and accountability in service delivery, empowering each user to monitor and manage their own applications across all States and UTs.

A. Applicant Dashboard Template

Application ID	Service	Department	District	Date of Application	Current Status	SLA (Days)	Time Elapsed (Days)	Pending Action by Applicant	Last Update	Download Letter	Raise Query / Escalate	Feedback Status
2025LU12034	Trade License	Labour Department	Lucknow	04-04-2025	Under Review	7	3	None	07-04-2025	⬇	Click	Not Submitted
2025LU12520	Shops Registration	Labour Department	Lucknow	28-03-2025	Action Required: Upload	15	10	Upload Document	07-04-2025	⬇	Click	Not Submitted
2025LU11011	Fire NOC	Fire Department	Lucknow	14-03-2025	Approved	30	12	None	26-03-2025	⬇	Click	Submitted

Filter Options:

i. Service
ii. Department
iii. Application Status (Applied/Under Review/Action Required/Approved/Rejected)

iv. SLA Status (Within/Exceeded)
v. Time Period

B. Data Logic and Calculation Formulae
i. SLA Status is marked "Within" if (Time Elapsed ≤ SLA Days); "Exceeded" if (Time Elapsed > SLA Days).
ii. Time Elapsed (Days):
Formula: Time Elapsed = (Current Date – Date of Application) – Total Pendency Period (if any).
Pendency Period: Number of days application was kept pending for applicant's action (e.g., document upload, clarification).
iii. Pending Action by Applicant: System auto-populates this field with "None" if no applicant action is needed, or describes the required action (e.g., "Upload Document", "Provide Clarification").

C. Visual Indicators and User Interface Features
i. Status Colour Indicators: Green – Approved, Yellow – Pending Applicant Action, Blue – Under Department Review, Red – SLA Exceeded
ii. Application Progress Tracker: Visual indicator showing each application's stage (e.g., Submission → Review → Decision → Completion).
iii. Prominent Action Buttons:
- Download Acknowledgment/Approval/Rejection Letters
- Raise Query/Escalate (opens query form and tracks response)
- Submit Feedback

iv. Displays alerts and reminders for pending actions.
v. Last updated timestamp displayed at the top of the dashboard.

E. Operational Guidelines
i. Dashboard shall be accessible only to the authenticated applicant through secure login.
ii. Application statuses and actions shall be updated through API integration with departmental backends, ensuring data accuracy.

F. Maintenance and Update Protocol

i. Dashboard data must auto-refresh at least once every 2 hour, or upon applicant login.

ii. Helpdesk and in-app support to be available for applicant queries, with visible escalation channels.

Annexure 5: Incentive dashboard

This annexure provides the standardized framework for the public-facing Incentives Dashboard. It ensures uniformity across States/UTs in displaying incentive scheme data, performance metrics, and applicant-facing eligibility tools.

A. Incentives Dashboard Template

Metric	Scheme	Sector	District	Application Period	Applications Received	Applications Approved	Applications Disbursed	Average Processing Time (Days)	Median Time (Days)	Minimum Time (Days)	Maximum Time (Days)
Capital Subsidy for MSMEs	Capital Subsidy Scheme	Food Processing	Ahmedabad	Apr–Jun 2025	145	130	112	18.6	16	7	41

Filter Options:

i. Scheme Type (Capex-linked, Employment-based, Tax-linked)
ii. Sector
iii. District
iv. Application Status (Received/Approved/Disbursed)
v. Time Period

B. Data Logic and Calculation Formulae

i. Average Processing Time for an incentive (Days) = (Total time taken from application submission to final disbursement – Total applicant-side delay for disbursed applications in the last 12 months) ÷ Number of disbursed applications
Example:
Total time (submission to disbursement) = 2,083 days for 112 applications
Applicant delay = 215 days
Net time = 2,083 – 215 = 1,868
Average = 1,868 ÷ 112 = 16.68 Days

ii. Median Time (Days = Middle value of all disbursed application times (excluding applicant-side delays), sorted in ascending order.
Example: [13, 14, 16, 17, 18, 20, 21] → Median = 17

iii. Minimum and Maximum Time (Days) = Smallest and largest duration for individual disbursements, excluding applicant delays.
Example: [7, 10, 14, 18, 20, 25, 32] → Min = 7, Max = 32

C. Visual Indicators and User Interface Features

i. Real-time status badges for submitted, approved, and disbursed stages
ii. Expandable rows for application-level details (Application ID, amount, date of disbursement)
iii. Icons for delayed (> 30 days) and expedited (< 10 days) applications
iv. PDF and XLSX export functionality

D. Operational Guidelines

i. All scheme configurations and eligibility criteria must align with officially notified policies by the State Government or Ministry concerned.
ii. Application statuses (approved, disbursed) must be validated through integrated backend systems.
iii. Any policy update impacting the incentive calculator logic must be reflected within 15 working days.
iv. Data must be archived for five years.

E. Maintenance and Update Protocol
   i. Performance data must be refreshed every 2 hours automatically or it should be real time.
   ii. Update logs must be maintained.

Annexure 6: Inspection Dashboard & Checklist Format

This annexure sets out the standardized structure for developing and operationalizing the Inspections Dashboard under the SWS. The purpose of this dashboard is to facilitate transparent, traceable, and time-bound monitoring of inspection activities across all States and UTs, thereby strengthening regulatory oversight and enhancing investor confidence.

A. Sector-wise Inspection Summary Tracker

Department	Sector	Total Inspections Conducted	Self-Certification Exemptions	Third-Party Certification Exemptions	Avg. Time (Days)	Median Time (Days)	Reports ≤ 24 hrs (%)	Reports > 24 hrs (%)
Labour	Manufacturing	180	25	40	3.8	3	84.4%	15.6%
Fire Services	Warehousing	62	5	8	2.9	2	90.3%	9.7%

Formulae:

i. Average Time (Days) = Total inspection duration for all inspections ÷ Number of inspections
   Example: 684 ÷ 180 = 3.8 Days
ii. Reports ≤ 48 hrs (%) = (No. of inspection reports uploaded within 48 hours ÷ Total inspections) × 100
   Example: 152 ÷ 180 = 84.4%
iii. Reports > 48 hrs (%) = 100 − Reports ≤ 48 hrs (%)
   Example: 100 − 84.4 = 15.6%

Filters for Summary Tracker:

i. Department
ii. Sector
iii. Date Range (From – To)
iv. SLA Compliance (Yes/No)
v. Certification Type (Self/Third-Party)

B. Individual Inspection Report Tracker

Inspection ID	Inspector Name	Enterprise	Date of Inspection	Compliance Status	Photos/Videos Uploaded (Y/N)	Investor Feedback (Y/N)	Feedback Score (1–5)	Finalisation Date
INSP-2024-022	S. Sharma	M/S Orion Pvt Ltd	10-Apr-2024	Compliant	Yes	Yes	4	12-Apr-2024

Note: Inspection reports must allow investor comments within 24 hours prior to finalisation.

Filters for Individual Tracker:

i. Inspector Name
ii. Date of Inspection
iii. Compliance Status
iv. Feedback Score
v. Enterprise Name
vi. Sector

C. Visual Indicators and User Interface Features

i. SLA compliance bars are displayed by department and sector, showing real-time adherence to inspection timelines and report upload requirements.
ii. Colour-coded tags indicate the timeliness of report submission, with green for reports uploaded within 48 hours and red for delays beyond this period.
iii. Icons for file upload signal the presence (or absence) of required photos and videos, which are mandatory for high-risk or red-flagged inspections.
iv. Filter options are available for sector, inspector, date, SLA compliance, and certification type.
v. A dedicated section for investor/applicant comments and feedback is prominently displayed and remains editable until the inspection report is finalised.

D. Operational Guidelines

i. Only pre-approved officers and third-party inspectors should be assigned

ii. For high-risk or red-flagged inspections, uploading of photographic and/or video evidence is mandatory and must be verified at the time of report submission. All scheduling, status changes, and outcomes relating to inspections must be digitally recorded and traceable through the dashboard.

iii. Applicants are required to be notified automatically at the following key stages: Scheduling of inspection, Completion of inspection, and Requirement for feedback or comments prior to report finalisation.

E. Maintenance and Update Protocol

i. Dashboard to refresh every real time or every 2 hours

ii. The dashboard itself must refresh in real time or at intervals not exceeding two hours, thereby ensuring data currency for all stakeholders.

F. Model Inspection checklist

To ensure consistency in regulatory oversight, every applicable service or clearance under the SWS must be supported by a pre-defined inspections checklist. This checklist should explicitly specify risk-based inspection criteria, standardized procedures, and clear compliance triggers, thereby minimizing discretion during field inspections. Adoption of such checklists ensures that inspections are conducted in an objective and uniform manner. The model inspections checklist illustrated below shall serve as the foundational reference for all prescribed services.

i. Labour Laws

The Payment of Bonus Act, 1965
Register of computation of allocable surplus in “Form A”.
Register of set on and set off the allocable surplus in “Form B”
Register of the details of the amount of bonus due to each of the employees, the deduction under section 17 & 18 and the amount disbursed in “Form C”

The Equal Remuneration Act, 1976
Discrimination While Recruiting Men and Women
Non-payment of remuneration at equal rates to men and women workers for same work or work of a similar nature
Reduced the rate of remuneration for complying with the provision of equal remuneration
Contract Labour Act, 1970 (Employer)
Registration Certificate
Displayed notice showing the wages, hours of work, wage period, date of payment, name and address of inspector at conspicuous place.
Contract Labour Act, 1970 (Contractor)
License Not Obtained by The Contractor
Muster Roll cum Wage Register of workers engaged by contractor
Non-Issue of Wage Slips
Non-Issue of Employment Card
The Minimum Wages Act 1948
Failure To Display Notice\Containing Minimum Rates of Wages Fixed Together with Abstract of Provisions of The Act and Rules
Whether the employer is paying wages to the worker as per the prescribed Minimum wages.
Failure to issue wage slips at least a day prior to disbursement of wages
Wages / payments by an account payee cheque drawn in favour of the employees or by crediting the same in the bank account of employee
The Payment of Wages Act, 1936
Failure To Pay the Wages Before Expiry of the Day Specified After the Last Day of The Wage Period
Wages / payments by an account payee cheque drawn in favour of the employees or by crediting the same in the bank account of employee
The Payment of Gratuity Act, 1972
Abstract of the Act should be displayed at conspicuous place.
Notice of opening of establishment

Non-Registration
Non-Payment of Gratuity in Time
The Shop and Establishment Act
Registration Certificate of establishment/renewed certificate
Non-Payment of Overtime Wages
If Workers are doing overtime work, then should paid at the double of ordinary rate of wages.
Maternity Benefit Act, 1961[2]
Employed or allowed to work a woman worker during the prohibited periods
Non-Payment of maternity and other benefits
Labour Welfare Fund Act[1 2]
Non-Payment of Contribution of Employees and Employers
Non-Payment of Un-Paid Accumulations

ii. Factories Act 1948

Licence Renewed up to: Licence fee paid
Factory building plans approved detail
Whether Safety guards or fencing is provided to the moving parts of the machinery
Whether hoist and lifts examined by competent person?
Whether fire hydrant systems are provided to all the hazardous areas which are prone to Fire?
Automatic fire extinguishing appliances, fire resisting dampers electrically interlocked with heat sensitive / smoke detectors for ventilations ducts, pneumatic conveyors and similar equipment Provided
Unobstructed access to firefighting provided

Is protection from lightening provided a) For building in which explosive/flammable substances are manufactured, stored or handled b) Storage tanks containing flammable liquids c) Buildings, tall chimneys or sacks where flammable gases or vapours likely to present d) Substation buildings/transformers / switch yards
Whether Canteen provided?
Whether lunchrooms provided
Whether Creche provided?
Whether Welfare officer appointed?
Whether Ambulance Van provided?
Adequate ventilation by the circulation of fresh air provided
Muster roll maintained
Leave with wages Register maintained
Are the health records available to workers
Is an ambulance van provided? If so, furnish Registration number:

iii. Legal Metrology

Inspection Checklist (For New Manufacturing Licence)
Registration, Licenses, Renewals and Verifications under the Legal Metrology Act, 2009
Registered Partnership deed, in case of Partnership firm or Memorandum of articles in case of company
Copies of the Certificates of Approval of Model
Copies of Security Deposit for Rs.10,000/- in the form of NSC
Copy of Certificate indicating Number and date of registration number of current shop/establishment/municipal trade licence

Lease/Rental /Ownership deed of premises, as the case may be along with the proof that the said premises is in the name of the Lessor/Owner.
GST registration certificate or exemption declaration by the applicant (if applicable)

Inspection Checklist (For Renewal of Manufacturer license)
Registration, Licenses, Renewals and Verifications under the Legal Metrology Act, 2009
Registered partnership deed in case of Partnership firm of Memorandum of articles in case of company
Copy of Certificate indicating Number and date of registration number of current shop establishment/municipal trade receipt
Lease/Rental /Ownership deed of premises, as the case may be along with the proof that the said premises is in the name of the Lessor/Owner
GST registration certificate or exemption declaration by the applicant (if applicable

iv. CTE & CTO (Air & Water Act)

Check Points
Orange Category
Pre-inspection activities
Location
Latest consent orders/directions issued to the industry.
During Inspection
Manufacturing area
Effluent generating sources
Effluent collection, storage, treatment and disposal areas
Air pollution sources and control systems
Solid and hazardous waste generation sources, storage and disposal areas
Operational status of the industry (whether in operation (or not) / seasonal)

Check Points
Details of water consumption and status of flow meters provided for recording water consumption for various purposes along with meter readings.
Details of Water Cess assessment and payment.
Effluent generation sources and quantities (as per records)
Effluent collection, treatment and disposal details.
Operation and maintenance of effluent treatment systems.
Air pollution sources and control measures.
Operation and maintenance of air pollution control equipment / systems.
Details of solid and hazardous waste generation, storage and disposal.
Documentary evidence from the industry to ascertain compliance status.
Red Category
Pre - inspection activities
Exact location
Manufacturing processes
During Inspection
Surrounding areas along the boundary of the industry to verify if there is any discharge of effluents or dumping of solid or hazardous waste.
Manufacturing area
Operational status of the industry (whether in operation/seasonal/sick/closed, etc)
Production records for a period of last six months (Excise Returns)
Consumption quantities of major raw materials during a period of last six months
Details of water consumption and status of flow meters provided for recording water consumption for various purposes along with meter readings.
Details of Water Cess assessment and payment.
Effluent generation sources and quantities (as per records)

Check Points
Effluent collection, treatment and disposal details.
Operation and maintenance of effluent treatment systems.
Status of flow meters provided for recording effluent generation, treatment and disposal along with meter readings.
Air pollution sources and control measures.
Operation and maintenance of air pollution control equipment / systems.
Status of energy meters provided for effluent treatment and air pollution control systems along with meter readings.
Details of solid and hazardous waste generation, storage and disposal

Annexure 7: Guidance Module

This annexure provides the standardized framework for the public-facing Queries Dashboard under the SWS. It is intended to enable structured capture, monitoring, and resolution of applicant queries while ensuring transparency, accountability, and timely responsiveness across all States and UTs.

A. Service level Queries SLA Dashboard Template

Department	Service	Total Queries Logged	Resolved Within SLA	SLA Compliance (%)	Average Resolution Time (Days)	Median Resolution Time (Days)	Min Time (Days)	Max Time (Days)
Industries	Land Allotment	120	104	86.7%	4.3	4	2	9

✓ Formulae:

i. SLA Compliance (%) = (Resolved Within SLA ÷ Total Queries Logged) × 100
   Example: 104 ÷ 120 = 0.867 × 100 = 86.7%
ii. Average Resolution Time (Days) = Total of all individual Actual Resolution Times ÷ Number of resolved queries
   Example: 520 ÷ 120 = 4.3 Days
iii. Median/Min/Max Time = Based on actual resolution times after removing applicant delays

✓ Filter Options:

i. Department
ii. Service
iii. Timeline
iv. Escalation Status
v. Applicant Type
vi. Resolution SLA status (Met/Unmet)

B. Individual Query Resolution Tracker

Ticket ID	Service	Department	Submitted On	Applicant Reply Delay (Days)	Final Resolution Date	Actual Resolution Time (Days)	Status	Escalated (Y/N)	Resolution Summary
QT-2024-005	Land Allotment	Industries	01-Apr-2024	8	12-Apr-2024	3	Resolved	No	Clarified zoning classification

✓ Formulae:

i. Actual Resolution Time (Days) = (Final Resolution Date − Submitted on Date) – Applicant Reply Delay (Days)
Example: 12-Apr - 01-Apr = 11 days; 11 − 8 = 3 Days

✓ Filter Options:

i. Department
ii. Service
iii. Timeline
iv. Escalation Status
v. Applicant Type
vi. Resolution SLA status (Met/Unmet)

C. Visual Indicators and User Interface Features

i. SLA compliance tags (Met/Unmet)
ii. Auto-flag delayed responses (≥2 days beyond SLA)
iii. Graphs for SLA compliance trend by service
iv. PDF and XLSX export options

D. Operational Guidelines
   i. SLA timelines must align with those defined under the Public Service Guarantee (PSG) Act.
   ii. Applicant-side delay must be recorded through timestamped logs in the system.
   iii. Only backend-validated tickets should reflect in dashboard calculations.

E. Maintenance and Update Protocol
   i. Data must auto-refresh real time or every 2 hrs.
   ii. States must archive ticket data for at least five years.

Annexure 8: Grievance Module & User Feedback

This annexure provides the standardized framework for the public-facing Grievance Dashboard under the SWS. It enables structured redressal of applicant grievances while ensuring transparency, real-time performance tracking, legal validity, and clear accountability of departments and officers.

A. Service-Level Grievance SLA Summary Dashboard

The dashboard shall reflect department-wise performance against notified grievance redressal timelines. The following data points are to be captured and displayed in real time:

Department	Service	Grievances Logged	Resolved Within SLA	SLA Compliance (%)	Average Resolution Time (Days)	Median Resolution Time (Days)	Min Time (Days)	Max Time (Days)
Labour	Factory License	80	72	90.0%	5.1	4	2	12

Formulae:

i. SLA Compliance (%) = (Resolved Within SLA ÷ Grievances Logged) × 100
   Example: 72 ÷ 80 = 0.90 → 90.0%
ii. Average Resolution Time = Total working days taken for resolution (excluding applicant delays) ÷ Number of resolved grievances
   Example: 408 ÷ 80 = 5.1 Days
iii. Median Time = Middle value from the sorted list of resolution times
iv. Min/Max Time = Fastest and slowest resolution duration (excluding applicant delays)

Filtering Options: The dashboard shall allow filtering by Department, Service Name, SLA Status, Escalation Flag, applicant type, and Time Range (Daily, Weekly, Monthly, Custom).

B. Individual Grievance Resolution Tracker

Each grievance shall be individually tracked and recorded with details to ensure auditability and performance monitoring.

Grievance ID	Service	Department	Submitted On	Applicant Delay (Days)	Final Resolution Date	Actual Resolution Time (Days)	Status	Escalated (Y/N)	Escalation Level	Escalation Start Date	Escalation Resolution Status	Feedback Score (1–5)	Applicant Comment	Officer Response	Remarks
GR-2024-011	Factory License	Labour	05-Apr-2024	2	12-Apr-2024	5	Resolved	No	NA	NA	NA	4	NA	NA	Issue resolved satisfactorily

Formulae:

Actual Resolution Time (Days) = (Final Resolution Date − Submitted Date) – Applicant Delay (Days)

Example: 12 − 5 = 7 − 2 = 5 Days

Filtering Options: Filters shall be enabled to isolate individual grievance cases by status, escalation level, resolution time, and department.

C. Feedback Submission Tracker (Public View)

Application ID	Service Name	Department	Date of Service Completion	Feedback Score (1-5)	Comments	Submitted On
APP-2024-001	Trade License	ULB	12-Apr-2024	3	Delay in approval	13-Apr-2024
APP-2024-002	Land Allotment	Industries	10-Apr-2024	5	Very smooth process	10-Apr-2024

Filters:

i. Date of Service Completion
ii. Feedback Score
iii. Department
iv. Service Name

D. Data Logic and Calculation Formulae for user feedback

i. Average Response Time to Feedback = Total time taken from feedback submission to action completion for all feedback resolved in the last 12 months ÷ Number of feedback entries resolved in that period
Example: 230 days ÷ 92 feedback cases = 2.5 Days

ii. Percentage of Feedback Actioned = (Number of feedback entries where action was taken ÷ Total feedback received) × 100
Example: 80 ÷ 100 = 80%

iii. Negative Feedback Alert Trigger = Flag service for review if feedback score ≤ 2 for more than 30% of total feedback entries over the last 2 months.
Example: 15 negative scores out of 45 entries = 33.3% → Trigger Raised

E. Visual Indicators and UI Features: The interface shall incorporate the following features:

i. SLA Compliance: Green indicator for compliance; Red for breach

ii. Escalation Flag: Yellow tag for auto-escalated grievances with escalation level and date

iii. Graphical visualization of average resolution time, SLA performance meter, and user satisfaction score trends

iv. System-generated PDF closure receipts with timestamp and digital signature available for download

F. Operational Guidelines

i. SLA timelines must align with the State's Public Service Guarantee Act

ii. Applicant-induced delays must be logged through automated inactivity detection

iii. Escalation workflows shall include multi-level auto-routing after defined timelines (SLA + buffer days)

iv. Nodal officer responsible at each escalation level must be tagged and visible in administrative view

G. Maintenance and Update Protocol

i. Dashboards shall auto-refresh in real time or every 2 hrs.

ii. Grievance records shall be archived and accessible for minimum five years for compliance, analytics, and audits. Grievance taxonomy, workflows, and escalation logic shall be standardised across departments & integrated with NSWS API architecture

Annexure 9: List of services

#	Essential/ Desirable	Stage	Manufacturing/ Service/ Both	Approvals/ Clearances	Derived Approvals/Clearances	Act	Rules
1	Essential	Pre-establishment	Both	Registration of Cooperative Societies	Minutes of AGM, Amendment (Change of address/name, Change/Expansion/ Deletion of scope, Area of operation, Change of Board members), Renewal, Surrender, Transfer/Merger	State Cooperative Societies Act	State Rules and guidelines
2	Essential	Pre-establishment	Both	Registration of Partnership Firms	Minutes of AGM, Amendment (Change of address/name, Change/Expansion/ Deletion of scope, Area of operation, Change of Board members), Renewal, Surrender, Transfer/Merger, Change/addition of Director	Indian Partnership Act of 1932	State Rules and guidelines
3	Essential	Pre-establishment	Both	Registration of Societies	Minutes of AGM, Amendment (Change of address/name, Change/Expansion/ Deletion of scope, Area of operation, Change of Board members), Renewal, Surrender, Transfer/Merger, Change/addition of Director	Societies Registration Act, 1860	State Rules and guidelines
4	Essential	Pre-establishment	Service	Registration under Profession Tax	Amendment, Surrender	State Professional Tax Acts	State Professional Tax Rules
5	Essential	Pre-establishment	Both	Building Plan Approval	Plinth Approval, Certification of structural design and architectural drawings, Completion certificate, Occupancy certificate, Amendment, Modification, Demolition, Alteration	State Municipal Corporation Act	State Rules and guidelines
6	Essential	Pre-establishment	Both	Fire License/ NOC	Advisory, NoC, Renewal, Amendment	State Fire Service Act	State Rules and guidelines

#	Essential/ Desirable	Stage	Manufacturing/ Service/ Both	Approvals/ Clearances	Derived Approvals/Clearances	Act	Rules
7	Essential	Pre-establishment	Both	Electricity Connection - Temporary	Power feasibility certificate, Temporary, Regular, Change in load, Modification, Transfer, Surrender	Electricity Act, 2003	State Distribution Companies
8	Essential	Pre-establishment	Both	Obtaining Drawing Approval from Electrical Inspectorate	Form B, Electrical Installation Safety Approval	Electricity Act, 2003	State Rules and guidelines
9	Essential	Pre-establishment	Manufacturing	Consent to Establish (SPCB)	Siting criteria, Distance from forest, Consent to operate, Renewal, Amendment, Surrender	Air & Water Acts	CPCB Guidelines 2024
10	Essential	Pre-establishment	Both	NOC for tree felling	Tree transit permission, Replantation	State Tree Protection Act	State Rules
11	Essential	Pre-establishment	Manufacturing	Approval of plan for factory	NA	Factories Act, 1948	State Rules
12	Essential	Pre-establishment	Both	Registration under Shops and Establishment Act	Renewal, Surrender, Transfer, Amendment	State Shops and Establishment Act	State Rules
13	Essential	Pre-establishment	Both	Allotment of land in Industrial Area	Cancellation of Plot and Refund, Change of Project (Product), No Dues Certificate, NOC For Joint Mortgage, Amalgamation, Bifurcation, Sub lease, Transfer, Sale, Return, Cancellation of allotment, Surrender, Payment of property tax, Establishment of Additional Unit, Payment of lease rental, restoration of Plot after cancellation, Start of Production	NA	State Industrial Policies

29	Essential	Pre-establishment	Manufacturing	Registration of Boiler Manufacturers	Amendment, Transfer, Surrender	Boilers Act, 1923	Boiler Rules
30	Essential	Pre-establishment	Both	Registration for Trade License	Renewal, Amendment, Transfer, Surrender	State Municipal Corporation Act	State Guidelines
31	Desirable	Pre-establishment	Manufacturing	Manufacturing license	Renewal, Amendment, Transfer, Surrender	Insecticides Act, 1968	Insecticides Rules, 1971
32	Desirable	Pre-establishment	Manufacturing	Drug Manufacturing License	Renewal, Amendment, Transfer, Surrender	Drugs and Cosmetics Act, 1940	Drugs and Cosmetics Rules
33	Desirable	Pre-establishment	Service	Retail Drug License	Renewal, Amendment, Transfer, Surrender	Drugs and Cosmetics Act, 1940	Drugs and Cosmetics Rules
34	Desirable	Pre-establishment	Service	Wholesale Drug License	Renewal, Amendment, Transfer, Surrender	Drugs and Cosmetics Act, 1940	Drugs and Cosmetics Rules
35	Essential	Pre-establishment	Both	DG set installation	Renewal, Amendment, Transfer, Surrender	Electricity Act, 2003	State Rules and guidelines
36	Essential	Pre-establishment	Both	Installation of lift/escalator and related inspections	Renewal, Amendment, Transfer, Surrender	State Acts	State Rules and guidelines

#	Essential/ Desirable	Stage	Manufacturing/ Service/ Both	Approvals/ Clearances	Derived Approvals/Clearances	Act	Rules
37	Essential	Pre-establishment	Both	Permission to draw water from river/public tanks	Allocation, Renewal, Amendment, Transfer, Surrender		State Rules
38	Essential	Pre-establishment	Manufacturing	Authorization - Hazardous Waste	Renewal, Amendment, Transfer, Surrender	Environment (Protection) Act, 1986	Hazardous Waste Rules, 2016
39	Essential	Pre-establishment	Service	Authorization - Bio-Medical Waste	Renewal, Amendment, Transfer, Surrender	Environment (Protection) Act, 1986	Bio-Medical Waste Rules, 2016
40	Essential	Pre-establishment	Manufacturing	Authorization - Solid Waste	Renewal, Amendment, Transfer, Surrender	Environment (Protection) Act, 1986	Solid Waste Management Rules, 2016
41	Desirable	Pre-establishment	Manufacturing	Brand Registration	Renewal, Amendment, Transfer, Surrender	State Excise Act	State Rules
42	Desirable	Pre-establishment	Manufacturing	Label Registration	Renewal, Amendment, Transfer, Surrender	State Excise Act	State Rules
43	Desirable	Pre-establishment	Service	License for IMFL sale, import/export	Renewal, Amendment, Transfer, Surrender	State Excise Act	State Rules
44	Essential	Pre-operation	Both	Registration under Labour Welfare Fund	Renewal, Amendment, Transfer, Surrender	Labour Welfare Fund Act	State Rules
45	Essential	Pre-operation	Both	Registration under Payment of Gratuity Act	Renewal, Amendment, Transfer, Surrender	Payment of Gratuity Act, 1972	State Rules
46	Essential	Pre-operation	Both	Registration under Building and Other	Renewal, Amendment, Transfer, Surrender	BOCW Act, 1996	State Rules

#	Essential/ Desirable	Stage	Manufacturing/ Service/ Both	Approvals/ Clearances	Derived Approvals/Clearances	Act	Rules
				Construction Workers (BOCW) Act			
47	Essential	Pre-operation	Both	Registration under Inter-State Migrant Workmen Act	NA	ISMW Act, 1979	State Rules
48	Essential	Pre-establishment	Manufacturing	Registration of Boilers	Registration, Renewal, Transfer, Surrender	Boilers Act, 1923	Boiler Rules
49	Essential	Pre-operation	Both	License under Contract Labour (Regulation & Abolition) Act-CLRA	Renewal, Amendment, Transfer, Surrender	CLRA Act, 1970	State Rules
50	Essential	Pre-establishment	Manufacturing	License under Factories Act	Renewal, Amendment, Transfer, Surrender	Factories Act, 1948	State Rules
51	Essential	Pre-operation	Both	Registration of Principal Employer under CLRA	Renewal, Amendment, Transfer, Surrender	CLRA Act, 1970	State Rules
52	Essential	Pre-operation	Both	Registration under Motor Transport Workers Act, 1961	Renewal, Amendment, Transfer, Surrender	Motor Transport Workers Act, 1961	State Rules
53	Desirable	Pre-establishment	Both	Registrations under Legal Metrology	Manufacturer, Dealer, User, Repairer - Renewal, Amendment, Transfer, Surrender	Legal Metrology Act, 2009	Multiple Rules

#	Essential/ Desirable	Stage	Manufacturing/ Service/ Both	Approvals/ Clearances	Derived Approvals/Clearances	Act	Rules
54	Desirable	Pre-establishment	Manufacturing	License for pest control operations	Renewal, Amendment, Transfer, Surrender	Insecticides Act, 1968	Insecticides Rules, 1971
55	Desirable	Pre-establishment	Service	Permission for Movie Shooting	NA	State Municipal Corporation Act	State Municipal Rules
56	Desirable	Pre-establishment	Service	Registration of Hotels	Renewal, Amendment, Transfer, Surrender	State Municipal Corporation Act	State Municipal Rules
57	Desirable	Pre-establishment	Service	Registration of Travel Agents	Renewal, Amendment, Transfer, Surrender	State Municipal Corporation Act	State Municipal Rules
58	Desirable	Pre-establishment	Service	Registration of Tour Operators, Water Sports, and Adventure Sports Operators, etc	Renewal, Amendment, Transfer, Surrender	State Municipal Corporation Act	State Municipal Rules
59	Essential	Pre-establishment	Both	Authorization - Construction and Demolition (C&D) Waste	NA	Environment (Protection) Act, 1986	C&D Waste Management Rules, 2016
60	Desirable	Pre-establishment	Manufacturing	Seed License	License, Renewal and Amendment	Seeds Act, 1966	Seeds (Control) Order, 1983
61	Desirable	Pre-establishment	Manufacturing	NOC required for setting up of Explosives, Manufacturing,	Renewal, Amendment, Transfer, Surrender	Explosives Act, 1884	Explosives Rules, 2008

#	Essential/ Desirable	Stage	Manufacturing/ Service/ Both	Approvals/ Clearances	Derived Approvals/Clearances	Act	Rules
				Storage, Sale, Transport			
62	Desirable	Pre-establishment	Manufacturing	NOC required for setting up of Petroleum, Diesel & Naphtha manufacturing, storage, sale, transport	Renewal, Amendment, Transfer, Surrender	Petroleum Act, 1934	Petroleum Rules, 2002
63	Desirable	Pre-establishment	Service	Cinematograph License	Renewal, Amendment, Transfer, Surrender	Cinematograph Act, 1952	Cinematograph Certification Rules, 2024
64	Desirable	Pre-establishment	Service	Bar License	Renewal, Amendment, Transfer, Surrender	State Excise Act	State Rules
65	Desirable	Pre-establishment	Service	Malls/Departmental Store (Liquor)	Renewal, Amendment, Transfer, Surrender	State Excise Act	State Rules
66	Desirable	Pre-establishment	Both	NOC from municipality/ local body for State License for food business	Renewal, Amendment, Transfer, Surrender	Food Safety and Standards Act, 2006	Licensing and Registration of Food Businesses
67	Desirable	Pre-establishment	Both	Permission under Food Safety and Standards Act 2006	Renewal, Amendment, Transfer, Surrender	Food Safety and Standards Act, 2006	Licensing and Registration of Food Businesses
68	Essential	Pre-establishment	Manufacturing	Authorization under Battery Waste	Renewal, Amendment, Transfer, Surrender	Environment (Protection) Act, 1986	Battery Waste Management Rules, 2020

#	Essential/ Desirable	Stage	Manufacturing/ Service/ Both	Approvals/ Clearances	Derived Approvals/Clearances	Act	Rules
				Management Rules, 2020			
69	Desirable	Pre-operation	Service	Registration of rest estate agent under RERA	Renewal, Amendment, Transfer, Surrender	Rera Act	State rules
70	Desirable	Pre-establishment	Service	Blood Bank Licence	Renewal, Amendment, Transfer, Surrender	Drugs and Cosmetics Act, 1940	Drugs and Cosmetics Rules
71	Essential	Post-operations	Both	Certificate of Date of Commercial Production for availing incentives	NA	State Industrial Policy	State Industrial Guidelines
72	Desirable	Pre-establishment	Manufacturing	Net Metering Application and Connection Agreement	Renewal, Amendment, Transfer, Surrender	State Discoms provisions	State Discoms provisions
73	Desirable	Pre-establishment	Manufacturing	Manufacturing License for Class A & B Medical Devices	Renewal, Amendment, Transfer, Surrender	Drugs and Cosmetics Act, 1940	Medical Devices Rules, 2017
74	Desirable	Pre-establishment	Both	Goods carriage permit	Renewal, Amendment, Transfer, Surrender	Motor vehicle acts 1988	State motor vehicle rules
75	Desirable	Post-operations	Service	Registration to Sale	Renewal, Amendment, Transfer, Surrender	Insecticides Act, 1968	Insecticides Rules, 1971

#	Essential/ Desirable	Stage	Manufacturing/ Service/ Both	Approvals/ Clearances	Derived Approvals/Clearances	Act	Rules
76	Desirable	Pre-establishment	Manufacturing	Slaughterhouse license	Renewal, Amendment, Transfer, Surrender	Food Safety and Standards Act, 2006	State Municipal Rules
77	Essential	Pre-establishment	Manufacturing	Registration of Establishment	Renewal, Amendment, Transfer, Surrender	Beedi and Cigar Workers (Conditions of Employment) Act, 1966	State rules
78	Desirable	Pre-establishment	Service	Registration of builder under RERA	Renewal, Amendment, Transfer, Surrender	Rera Act	State rules
79	Essential	Pre-Establishment	Both	Layout Plan Approval	NA	State-specific Town and Country Planning Acts	State rules
80	Essential	Pre-establishment	Manufacturing	VAT Registration Certificate	Periodic VAT return filings, VAT payment and audit	State specific VAT acts	State rules

Annexure 10: GIS Land Bank

This annexure provides the standardized template and logic framework for developing and maintaining the GIS-based Land Bank Interface under the Single Window System. It ensures that investors can easily identify, assess, and apply for industrial land across all States and Union Territories, based on real-time data, infrastructure readiness, and service availability.

A. GIS Interface Dashboard Template (Illustrative)

Plot ID	Location	Area (Acres)	Land Use Category	Ownership	Infrastructure Available	Connectivity	Allotment Status	Application Link
DL-023	District A	2.5	Industrial	State Development Corp	Power, Water, Road, CETP, Substation, Plug-and-Play Units	Rail: 2 km, Road: Adjacent	Available	[Apply Here]
HR-101	District B	5.0	Agro processing	Private Park Dev.	Power, Road, Plug-and-Play (Sheds)	Road: 500m, Air: 12 km	Allotted	[Contact Nodal Officer]

B. Filtering Options (Investor Point of View)

i. Geographic Filters: State, District, Region, Industrial Area Name
ii. Sector-specific Filters: Type of industry/sector permitted (e.g., Food Processing, Textile, Electronics, Auto Components)
iii. Size Requirements: Minimum and maximum land area (in acres)
iv. Land Use Category: Industrial, Agro-processing, Warehousing, Logistics, Multi-use
v. Ownership Type: Government (SIDC), Private Developer, PPP
vi. Infrastructure Availability: Power, Water, Road, Drainage, Worker housing, Gas, Sewerage, Internet, Plug-and-Play Units (e.g., ready-built sheds, utility-ready plots)
vii. Connectivity: Distance to Highway, Railway, Airport, Inland Port/ICD
viii. Incentive Eligibility: Whether located in a special zone (e.g., EMC, Textile Park, SEZ)
ix. Zoning & Master Plan Compliance: Approved, Under Review, Notified

x. Allotment Status: Available, Allotted, Under Review, Reserved

C. GIS Layer Specifications

i. Satellite View, Zoning Overlay, and Infrastructure Mapping (Power, Roads, Water, Drainage)

ii. Land classification as per Layout/Master Plan

D. Maintenance and Update Protocol

i. GIS datasets must be updated at least once every quarter or upon any change in land parcel status

ii. All entries shall be reviewed for accuracy and updated with timestamped metadata including officer ID and land availability flag

iii. API logs and sync status shall be maintained by the nodal IT agency to ensure uninterrupted integration with NSWS and IILB

E. Sample GIS Attribute Metadata Table

Attribute	Sample Entry
Plot ID	UP-045
District	Gautam Buddha Nagar
Sector	Electronics Manufacturing
Ownership	Private Developer
Power Availability	Yes (Connected to substation)
Road Access	Yes (Adjacent to 60 ft. road)
Land Use Category	Industrial - Notified
Plug-and-Play Status	Available (Ready-built shed with utilities)
Zoning Status	Approved as per Master Plan
Developer Contact	Mr. Rajeev Kumar, +91-XXXXXXXXXX
Last Updated	10-Apr-2025
Metadata ID	META-GIS-UP-045

Note: All States and Union Territories must conform to this GIS template for uniform land data visualization, investor interfacing, and integration with national platforms.

Annexure 11: Intent to Invest Module

This annexure provides the standardized framework for the Intention to Invest module within the SWS. The objective is to enable prospective investors to formally register their preliminary interest in establishing or expanding business operations in a State/UT, thereby facilitating early government engagement, streamlined investor handholding, and proactive project monitoring.

A. Intent to Invest Dashboard Template

Intention ID	Applicant Name	Entity/Company Name	Contact Details	Preferred Sector(s)	Proposed Investment Amount (INR)	Preferred Project Location(s)	Project Type (New/Expansion)	Tentative Employment Generated	Land required (in Acres)	Brief Project Description	Status	Date of Submission
2025UKI001	Rajat Sharma	Everest Textiles Pvt. Ltd.	rajat@email.com / +91-XXXXXXXXXX	Textiles, Apparel	₹100 Cr	Rudrapur, Uttarakhand	New	350	30 acres	Textile manufacturing unit with green tech	Submitted	05-06-2025

Filter Options:

i. Applicant Details (Name, Entity, Contact)
ii. Preferred Sector(s) (dropdown/multi-select as per State investment policy)
iii. Proposed Investment Amount (numeric field)
iv. Preferred Location(s) (district, city/town, or industrial park)
v. Project Type (New / Expansion)
vi. Tentative Employment (numeric field)

B. Operational Guidelines

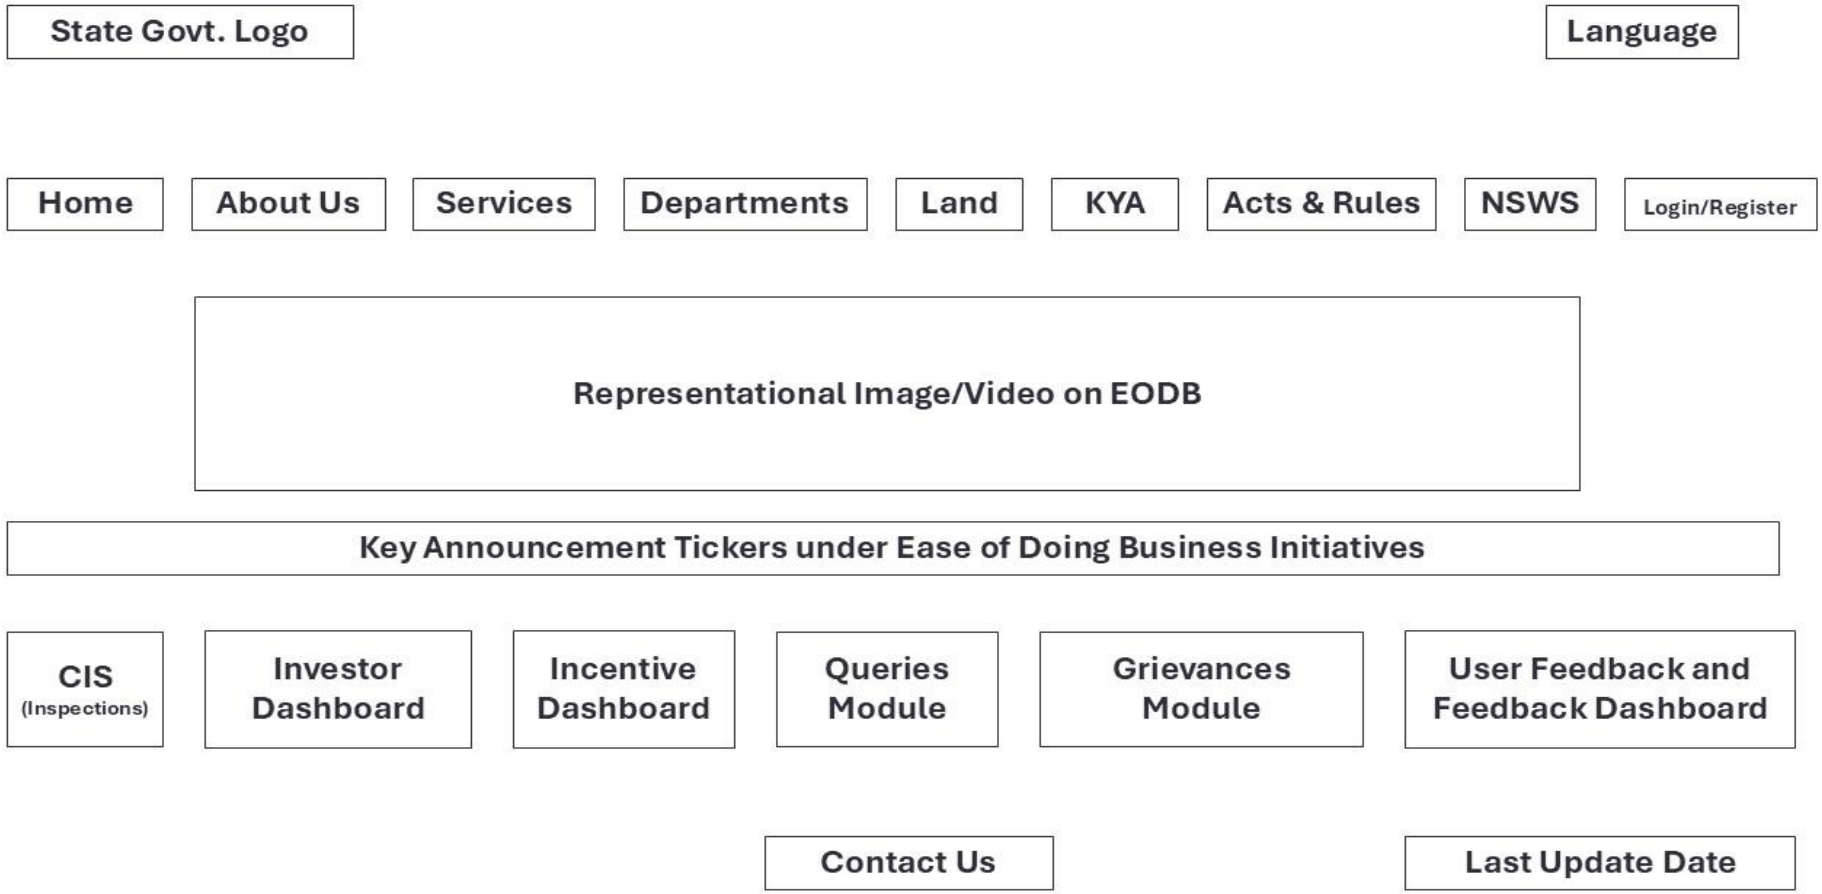

i. Provision for government to contact applicant for clarification or to verify bona fides

C. Maintenance and Update Protocol

i. Dashboard content must auto-refresh at least once every 2 hours or it should be real time.

ii. Helpdesk contact and escalation for applicant support at pre-application and post-MoU stages.

Annexure 12: Illustrative Wireframe for placement of modules on Single Window portal

8. Assessment Methodology

This section outlines the evidence-based scoring methodology to objectively evaluate the implementation of the SWS reforms covering all the **Essential Services**. The framework is designed to ensure uniformity and focuses on live demonstrations as well.

All essential modules and dashboards must be live and accessible on the SWS. States/UTs must:

i. Provide access credentials for backend validation of the SWS
ii. Ensure shared URLs remain functional for a minimum period of 5 years.
iii. Submit video walkthroughs, screenshots, and evidence documents for each module.
iv. Demonstrate reforms live during DPIIT evaluation.

Note: Non-submission or unverifiable claims will attract zero marks.

A. **Assessment & Evaluation Criteria**

i. Marks are assigned to each module/ dashboard.
ii. There are total of 44 essential services.
iii. A maximum of 277 marks are assigned to each of the essential service.

1. Single Sign-on and Single Business ID

#	Criterion	Max Marks	Required Evidence
1	Implement SSO for SWS and NSWS with API based integration	1	✓ Screenshot and walkthrough showing the functionality where UI/UX of the investor does not change ✓ Copy of issued Notification/G.O./ Legislation for integration with NSWS and State dept. portals
2	PAN based SBID for unit level applicant in SWS	20	✓ Screenshot and video walkthrough showcasing the SBID in SWS ✓ Copy of issued Notification/G.O./ Legislation for enactment of SBID
Maximum Marks			**21**

2. Know Your Approval (KYA)

#	Criterion	Max Marks	Required Evidence
1	Output includes name of service, department, SLA,	1	✓ Screenshot and video walkthrough of KYA output sample with all mandatory fields

	documents, steps, and direct application link		
2	Customise KYA results to applicant inputs	1	✓ Screenshot and video walkthrough showing the functionality
3	Downloadable KYA output must include full input parameters, detailed approval/compliance list that covers complete lifecycle incl. registrations, renewals, amendments, transfers etc.	20	✓ Screenshot and video walkthrough showing the functionality ✓ Copy of issued Notification/G.O./ Legislation to cover the complete lifecycle
4	SW homepage showcases real-time updates on policy, schemes, and regulatory changes	10	✓ Screenshot and video walkthrough of the homepage section ✓ Copy of issued Notification/G.O./ Legislation mandating the regulatory updates via a regulated channel
5	Any new approval/clearance published within 15 days of its introduction and integrated with KYA module	1	✓ Copy of issued Notification/G.O./ Legislation mandating and on SWS
6	Outcome includes disclaimer and reference notification	1	✓ Screenshot of disclaimer ✓ Copy of issued Notification/G.O./ Legislation
7	KYA module is accessible pre-login and allows an option to log in/register after the search is completed	1	✓ Screenshot or Video walkthrough showing the KYA module is accessible outside of login and selection of services is passed to applicant's profile after login
Maximum Marks			**35**

3. Common Application Form (CAF)

#	Criterion	Max Marks	Required Evidence
1	Dynamic CAF logic based on investor/business profile	20	✓ Video walkthrough of CAF adapting to inputs
2	Autofill of non-sensitive fields from	1	✓ Screenshot or walkthrough of auto-fill functionality

	investor/business profile		
3	Integration with Entity Digi locker for accessing documents	10	✓ Screenshot or walkthrough of the feature ✓ User Manual and SOP for availing the facility
4	Query control mechanism within 7 days with SLA-bound response cycle	1	✓ Notification screenshot / SOP with 7-day rule and escalation approval proof ✓ Copy of issued Notification/G.O./ Legislation
5	Real-time status dashboard linked to CAF	1	✓ Screenshot of approval tracker with status flags
6	Backend integration of CAF with relevant departments	5	✓ Screenshot of the functionality ✓ Copy of issued Notification/G.O./ Legislation
Maximum Marks			**38**

4. Unified payment module

#	Criterion	Max Marks	Required Evidence
1	Consolidated payment gateway for taking applications fee one time and dividing internally	10	✓ Screenshot and walk through of the functionality ✓ Copy of issued Notification/G.O./ Legislation mandating the payment mechanism
Maximum Marks			**10**

5. SWS Performance Dashboard

#	Criterion	Max Marks	Required Evidence
1	Dashboard lists all approvals listed in the guidebook	5	✓ Screenshot and walk through of the functionality
2	Dashboard allows to compare service wise, district wise trend over a period of time (selectable)	10	✓ Screenshot showing filter options

3	Average time taken is less than the notified timeline for all the approvals	30	✓ Screenshot and walk through of the functionality
Maximum Marks		**45**	

6. Applicant Dashboard

#	Criterion	Max Marks	Required Evidence
1	Personalized dashboard with a visible timer for active applications tracking progress	1	✓ Screenshot and walk through of the functionality
2	Check Application Status feature for allowing investors/business to query the real-time status	1	✓ Screenshot and walk through of the functionality
3	Filters by department, district, service, SLA, timeline	1	✓ Screenshot showing filter options
4	Daily auto-refresh with last updated timestamp	1	✓ Screenshot showing real-time tag/timestamp display
5	Approval-wise SLA, approval, rejection data displayed	1	✓ Public dashboard URL ✓ Sample tabular and graphical views
Maximum Marks		**5**	

7. Incentives Dashboard

#	Criterion	Max Marks	Required Evidence
1	'Know Your Incentive' questionnaire functional	10	✓ Walkthrough/video of form; sample logic tree output ✓ Copy of issued Notification/G.O./ Legislation mandating the applicability for all incentives

2	Incentive calculator shows scheme-wise estimates	1	✓ Calculator interface and sample calculation logic for 3 schemes
3	Application tracking by stage with status	1	✓ Screenshot of application statuses across lifecycle
4	Real-time performance metrics with filter options	1	✓ Screenshot of dashboard with processing time stats
Maximum Marks		**13**	

8. Inspection Dashboard

#	Criterion	Max Marks	Required Evidence
1	Model checklists used	1	✓ Sample checklist upload for respective approvals
2	Provision for Self-reporting of Inspection with photo/video uploads and digital sign	10	✓ Screenshot or video walkthrough of inspection submission
3	Inspection reports visible to applicant to respond/update before finalisation	1	✓ Sample investor feedback screen pre-finalisation
4	Risk-based inspection scheduler implemented	5	✓ Screenshot of risk-logic algorithm or scheduler output
5	SLA compliance for report availability tracked	1	✓ Dashboard metric showing reports within/beyond 48 hours
6	Wherever provisioned, third-party inspectors are able to upload inspection reports	5	✓ Screenshot or video walkthrough of inspection submission
Maximum Marks		**23**	

9. Guidance Module

#	Criterion	Max Marks	Required Evidence

1	Audio videos manuals are available for effective use of SWS for all modules	1	✓ Screenshot of the functionality
2	Automated acknowledgement system	1	✓ Screenshot of the functionality
3	Text analytics/AI used to derive insights from queries and periodically update FAQs	5	✓ Output of insights used to update FAQ/guidelines
4	Average time taken for query resolution is less than 7 working days	5	✓ Screenshot or walkthrough showcasing the details on SWS ✓ Copy of issued Notification/G.O./ Legislation mandating the limit
Maximum Marks		**12**	

10. Grievances Module & User feedback

#	Criterion	Max Marks	Required Evidence
1	Auto-routing to department and officer enabled up to the district level	5	✓ Backend mapping and routing logic validation
2	Post Resolution Feedback via Likert scale and comments	5	✓ Screenshot of submission form post service completion
3	Dedicated help desk/ call centre established	20	✓ Screenshot or walkthrough showcasing the functionality ✓ Copy of issued Notification/G.O./ Legislation mandating the setup
4	Average time taken for grievance resolution is less than 7 days	20	✓ Screenshot or walkthrough showcasing the timelines ✓ Copy of issued Notification/G.O./ Legislation mandating the limit
5	Auto escalation mechanism at minimum 3 levels	5	✓ Screenshot or walkthrough showcasing the functionality ✓ Copy of issued Notification/G.O./ Legislation mandating the auto escalation
6	Feedback escalations above 30% flagged	5	✓ Sample alert screenshot or feedback action taken log
7	Appellate mechanism established for rejected applications	10	✓ Screenshot or walkthrough showcasing the functionality ✓ Copy of issued Notification/G.O./ Legislation mandating the setup

8	Auto closure of grievance if the applicant is not responding	5	✓ Screenshot or walkthrough showcasing the functionality ✓ Copy of issued Notification/G.O./ Legislation mandating the setup
Maximum Marks		**75**
